APPENDICES
TO THE
REPORT OF THE HEALTH OFFICER
OF THE
DISTRICT OF COLUMBIA.

The publication of these reports as appendices to the report of the health officer is not to be construed to mean that the opinions and recommendations set forth in them have been adopted by the health department.

APPENDIX A.

REPORT OF THE MEDICAL SANITARY INSPECTOR.

DEAR SIR: I have the honor to submit the following report of the scarlet fever and diphtheria service for the fiscal year ending June 30, 1901. During the year there were reported 675 cases of diphtheria, a very gratifying decrease from the number reported during the preceding year, when 1,109 cases were brought to the notice of the department. This represents a decrease of nearly 40 per cent in the number of cases reported. The number of deaths and rate of mortality was also considerably reduced. There were only 80 cases that ended fatally, with a death rate of 11.85 per cent, against 197 deaths, with a death rate of 17.76 per cent for the year 1899-1900.

As usual, the number of colored persons who suffered with this disease was very small compared with the number of white, only 122, or 18 per cent, of all the cases occurring among that portion of our population. The disease occurred among the whites in the ratio of 2.88 to each 1,000 of population, and among the colored 1.39 to each 1,000 of population. The ratio of the total number of cases was 2.42 per each 1,000.

As in former years, the mortality among the colored cases is high, 25 of the fatal cases having been of them, giving a death rate of 20.7 per cent. The mortality of the white cases was 9.9 per cent. This is a decided gain over last year, when 15.9 per cent of the white and 25.3 per cent of the colored cases terminated fatally. A reference to Table I does not show any marked difference from that of former years except in the fewer cases reported.

Table II, giving the ages of those affected, shows a marked decrease in the mortality at all ages except between 25 and 50 years, where there is a slight increase.

Of scarlet-fever cases the number reported has decreased from 893 during the previous year to 488, a reduction of 45.36 per cent. The disease has run an unusually mild course, as is shown by the death rate, 1.43 per cent, only 7 cases having ended fatally.

Of all the cases reported only 31, or 6.35 per cent, were colored, among whom there were no decedents.

The white cases occurred in the ratio of 2.57 and the colored 0.36 to each 1,000 of population. The ratio of all cases was 1.53 to each 1,000 of total population.

Table IV, showing the ages of those who suffered from scarlet fever, differs from that of former years only in having no deaths among persons over the age of 12 years.

During the year there have been no outbreaks of either scarlet fever or diphtheria in any of the institutions of the city, nor have there been any cases which could be traced to the milk supply as the origin.

In the disinfecting service good work has been done by the department, and to this may be attributed to some extent the reduction in the number of cases of scarlet fever and diphtheria.

The method of procedure has been to first introduce formaldehyde gas into the room, either by a regenerator or the sheet method, and the following day remove to the "plant" for more thorough disinfection such articles as mattresses, pillows, etc., which could not be properly done at the house. As an additional measure of safety the inmates are instructed to wash the floors, woodwork, etc., with bichloride of mercury solution. All the work of the disinfection, except the latter, is done by employees of this office. During the early part of the year the occupants did the preliminary disinfection with formaldehyde furnished by the department. It is very gratifying to note the increase in the number of requests for disinfection after tuberculosis. The public is awakening to the fact that this is a contagious disease and that proper disinfection of the premises in which cases have existed is necessary.

Up to this past year I do not remember a single request for disinfection in such cases, whereas now we are very frequently asked to perform this work.

Although our appropriation for the disinfecting service is limited we are glad to do what we can in this matter, and hope the time will not be far distant when all houses in which tuberculosis patients have lived will be thoroughly disinfected.

At the disinfecting station or plant the following articles, 5,918 in number, have been rendered free of disease germs:

Mattresses	1,176	Rugs	361
Feather beds	161	Cushions	56
Bolsters	316	Hassocks	29
Pillows	1,962	Couches	10
Carpets	192	Portieres	21
Quilts	610	Books	192
Blankets	575		
Mattings	257	Total	5,918

Another cause which has contributed very largely to the prevention of the spread of scarlet fever and diphtheria, by reducing the number of foci of infection, has been the work of the wards for minor contagious diseases at Garfield and Providence hospitals.

During the year 153 cases of diphtheria and 53 of scarlet fever were removed to these wards, as well as 36 cases of erysipelas, 16 of measles, and 1 of chicken pox, distributed as follows:

At Garfield Hospital:	Cases.	At Providence Hospital:	Cases.
Diphtheria	144	Diphtheria	9
Scarlet fever	11	Scarlet fever	12
Measles	15	Measles	1
Erysipelas	21	Erysipelas	15
		Chicken pox	1
Total	191	Total	68

The total number of hospital days at Garfield was 3,356, as follows: Diphtheria, 144 cases, 2,482 days, averaging 17.23 each; scarlet fever, 11 cases, 366 days, averaging 33.27 each; measles, 15 cases, 238 days, averaging 15.86 each; erysipelas, 21 cases, 270 days, averaging 12.86 each.

Total number of hospital days at Providence was 1,751, as follows: Diphtheria, 9 cases, 179 days, averaging 19.9 days each; scarlet fever,

TYPE D¹.
0.5 to 1 μ thick.
2 to 3 μ long.

42 cases, 1,329 days, averaging 31.64 days each; measles, 1 case, 11 days, averaging 11 days each; erysipelas, 15 cases, 221 days, averaging 14.73 days each; chicken pox, 1 case, 10 days, averaging 10 days each; gangrene of foot, 1 case, 1 day.

In the bacteriological laboratory there were examined 3,546 cultures, of which 1,250, or nearly one-third, were primary for purposes of diagnosis. Of the primary cultures, 568, or 45.44 per cent, contained the diphtheria bacilli. There was an increase in the total number of cultures examined over that of the preceding year of 389, and of the primary of 41.

This does not seem a very large increase, but in proportion to the number of cases reported it is a decided gain. Last year the proportion of cases reported to the number of cultures submitted was 1 to 1.09, while during the year just closed it was 1 to 1.85.

During last winter and spring, at the request of the committee of the Massachusetts Association of Boards of Health to cooperate with other laboratories, we did some experimental work to determine the presence of diphtheria germs in healthy throats, classified them according to the Westbrook types, and tested them for virulence by injection into guinea pigs. It was requested that cultures be taken from the throats and noses of persons who had not been exposed to diphtheria within three or four months. Our results were to be sent to the Boston health department, and, by comparing the results obtained in thousands of cases, it was hoped that some conclusion might be reached as to what is best to be done from a sanitary standpoint with those who have no symptoms of the disease yet have the germ in their throats.

At this time the total results have not been published, but the result of our work is here given. Through the kindness of those in charge we were enabled to obtain cultures from the throats and noses of 226 persons, that is, 452 cultures from Providence, Washington Asylum, and children's hospitals, their ages varying from 1 to 100 years.

The character of the organisms found was as follows:

	Persons.	
	Throat.	Nose.
Diphtheria bacilli		
Staphylococci	17	46
Diplococci	105	161
Bacilli not diphtheria	77	19
Yeast	65	27
Streptococci	11	2
	8	

Some type of the diphtheria germ was found in 7.5 per cent of the throat and 20.35 of the nose cultures. Of course sometimes in one throat or nose would be found more than one organism, but in the throats or nasal passages of 53 different people, or 23.5 per cent of those examined, were found some type of the germ.

The different types found were:

Type.	Throat.	Nose.	Type.	Throat.	Nose.
C			E	1	2
C ¹	1		E ¹	2	2
D	1		E ²	8	36
D ¹		1	F	2	
D ²	1	1	G ²		4

It will be noticed that the most common type found was E², which was contained in 8 of the throat and 36 of the nose cultures, either pure or with other organisms.

If no experiments had been made to test the virulence of these organisms, the fact that this type was found in the nasal passages of 15.8 per cent of persons who had not been exposed to the contagion of diphtheria would render its presence in a culture of little value for diagnostic purposes.

Pure cultures of types D, E¹ (two cultures), E², and F were injected into guinea pigs and no reaction whatever produced. As a result of our experiments, we are forced to believe that these types at least are not pathogenic. We will, however, await with interest for the full report of the committee.

Respectfully,

JOHN E. WALSH, M. D.,

Medical Sanitary Inspector and Bacteriologist.

Dr. WM. C. WOODWARD,

Health Officer.

APPENDIX B.

REPORT OF THE CHEMIST.

DEAR SIR: I have the honor to submit the following report relative to the work performed in the chemical laboratory for the fiscal year ending June 30, 1901.

During the year a total of 1,206 analyses were made, as follows:

Milk	776	Formaldehyde	11
Water	145	Candy	9
Cream	59	Cider	22
Lard	29	Flour	11
Medicines	4	Bread labels	3
Olive oil	13	Ice	9
Tea	4	Fowler's solution of arsenic	10
Butter	19	Phenacetin	20
Vinegar	34	Glycothymoline	3
Sausage	3	Chipped beef	2
Chloride of lime	7	Other samples	3
Maple sirup	5		
Granulated sugar	2	Total	1,206
Examinations for coroner	3		

Milk.—Of the samples of milk examined, 357 were collected about the city, 199 from the Baltimore and Ohio station, 180 from the Southern Railway station, while the remaining 40 were submitted by private parties.

The average percentage of fat for the samples collected at the Baltimore and Ohio station was 4.2, while the average for those samples collected at the Southern Railway station was 4.3. These figures represent pretty accurately the quality of the milk as supplied to the city, from year to year, from the neighboring States of Maryland and Virginia.

In 1894 the average of the samples collected from the depots was 3.38 per cent; in 1896, 3.74 per cent; in 1898, 4.37 for the samples collected at the Southern Railway station, and 4.27 for those collected at the Baltimore and Ohio station. Since that time the figures have remained practically the same, averaging about 4.3 per cent for the samples representing the milk from Virginia and 4.2 for the samples representing the milk from Maryland. It must be evident, therefore, that any marked variation from these figures, representing the milk as retailed about the city, must be due either to willful adulteration or to gross carelessness.

The percentages of fat in the samples of milk collected about the city gave an average of 4.4, which is slightly higher than the average of those collected from the railway stations, but the variations of the individual samples from the standard are also much greater, the percentage of those below the legal standard, or under 3.5 per cent, being as follows: Baltimore and Ohio station, 5.5 per cent; Southern Railway station, 4 per cent; city, 15.1 per cent.

We also find them grouped as follows:

	Under 3 per cent.	From 3 to 3.5 per cent.	Over 3.5 per cent.
Baltimore and Ohio station	2	9	188
Southern Railway station	0	7	173
City	28	26	303

Taking the numbers representing samples above 3.5 per cent, we find that they give percentages as follows: For Baltimore and Ohio station, 98.9; for the Southern, 96.1; for the city, 84.8. It will thus be seen that the percentage of those samples collected about the city, above 3.5 is less than that of the samples collected from the railway stations, while the relative number below 3 per cent is much greater, from which it follows that in order to obtain an average of 4.4 per cent for those samples collected about the city, a number of the samples must have been considerably above the possible animal production.

It is sometimes contended, however, that the samples are collected about the city at times when the milk is not at its best, as, for instance, in the spring, when the grass is fresh and full of water, and therefore incapable of producing a rich milk, or in the summer, when the hot weather interferes with the digestive functions of the cow, or in the fall, when the grass is dry and scarce, or in the winter, perhaps, when, owing to confinement in the stable and lack of exercise the cow is unable to produce milk as rich as she would under other conditions. It would seem therefore that the proper time to take samples is in the future, not now.

During the past year, as in previous years, a number of complaints have been received as to the injurious quality of certain specimens of milk. It has been noticed that these complaints are more numerous, and in general, I would say, almost entirely confined to certain seasons of the year, namely, spring and fall. It has also been noticed that the milk complained of at such times usually has associated with it a disagreeable odor, which is, in general, due to or derived from certain weeds or plants eaten by the cow. Such milk is to many people more or less nauseating and undoubtedly capable of producing, particularly with infants, the symptoms usually attributed to such milk.

The odor of garlic and ragweed in milk is particularly objectionable, so that the elimination of these odors from the milk has become an important problem for the producers. Were it possible to remove these weeds from the pasture, this would be the most effectual way of getting rid of these odors. Unfortunately, however, owing to the rapidity with which these plants spread, one from the other, this method seems to be impracticable.

One method which is utilized for the removal of odors from milk is that of aëration, accompanied with pasturization. This method is one which is universally recommended, although the expense incidental to obtaining the necessary apparatus and appliances renders this method of somewhat limited application. Sometimes aëration is relied upon alone to accomplish this object, but where this is the case great care is necessary to secure pure air, otherwise more harm than good will be done, and the odors which are to be removed thereby are liable to be

replaced by other odors produced by certain bacteria with which the milk has become infected in the process of aëration.

From the standpoint of this Department there is only one method by which this grade of milk can be eliminated from our city's supply, and that is by an inspection of all the milk on its arrival in the city. This would necessitate the establishment of certain milk depots, which I have heretofore recommended.

Cream.—Of the samples of cream examined 15 were collected at the Baltimore and Ohio station, 31 at the Southern Railway station, 10 about the city, while the remaining 3 were submitted by private parties. Of this number, 2 from the city, 8 from the Baltimore and Ohio station, and 17 from the Southern Railway station were below the legal requirements. The variation from standard is also greater here than in the case of milk, the cream ranging from 15 to 25.6 per cent of fat, or from 25 per cent below to 25 per cent above the legal standard.

In the case of cream, however, unlike that of milk, we find that a large proportion of that supplied to the city by the producers is below the legal requirements, as will be seen from the following summary:

	Number examined.	Samples under 20 per cent.	Per cent below standard.
City	10	2	20
Baltimore and Ohio	15	8	53
Southern	31	17	54.8

In other words, about 50 per cent of the cream shipped to the city is below the standard required by law. The principal reason for this deficiency probably lies in the fact that but little attention has heretofore been given to cream, owing largely to lack of assistance in this department, which has rendered it necessary to devote most of our time to more important subjects. The additional force recently allowed this department will, however, permit of more attention being given to this commodity in the future, which will undoubtedly result in its improved quality.

Water.—Of the 145 samples of water examined 84 were submitted by private parties, 33 were from dairy farms, 12 from public wells, and the remaining 16 from miscellaneous sources. Of these numbers 37 of the samples of water from private wells were condemned, 14 from dairies, and 3 from the public wells, while 4 of the samples from private wells, 4 from dairies, and 1 from the public wells were reported as suspicious. Four other samples from the miscellaneous collection were also condemned, making a total of 58, or 40 per cent, of the total number examined.

Food.—In the examination of the various food products collected by this department a number of adulterations were met with.

Of the 29 samples of lard examined, 3 were found to be mixtures of beef suet and cotton-seed oil; 6 samples of cider were adulterated with salicylic acid for the purpose of preserving the same; 8 samples of vinegar, sold as cider vinegar, were found to be a cheap spirit vinegar colored in imitation of cider vinegar; 2 samples of so-called olive oil were found to have been derived from cotton seed, while 1 sample of butter proved, upon analysis, to be oleomargarine.

The following table will show the relative number of samples adulterated and the disposition of the suits instituted:

	Sample examined.	Adulter- ated.	Fined.	Collateral forfeited.
Lard	29	3	1	2
Vinegar	34	8	5	3
Cider	22	6	3	3
Olive oil	13	2	1	(a)
Butter	19	1	1	-----

a One dismissed.

In reference to case dismissed for the sale of cotton-seed oil for olive oil, I would state that the oil was purchased and paid for as olive oil, but that when the dealer was asked his name, suspecting that the sale had been made to an inspector of this department, he disclaimed that the sale of the article in question was olive oil, and stated that the same was cotton seed. This latter disclaimer being heard by a boy, who was not present when the sale was made, and the evidence to that effect being produced in court, the case was dismissed.

Six samples of chloride of lime were purchased, which on examination gave percentages of available chlorine ranging from 5 to 17.3. The pharmacopœia gives the standard for chlorinated lime as 35 per cent of available chlorine. While there might be some technical objection that chloride of lime and chlorinated lime were different products, yet as the ordinary bleaching powder, or the so-called chloride of lime, is a chlorinated product of lime, and therefore in reality a chlorinated lime, and in view of the fact that this is the only chlorinated lime found in this market, it would seem that such objection is not well taken, and that the samples examined showed considerable deficiency in the amount of available chlorine contained therein, as well as great variation in the composition of the various samples.

In support of this contention that the so-called chloride of lime is supposed to give 35 per cent of available chlorine, I would state that a can of chloride of lime was afterwards submitted to the department for analysis, by a certain druggist of this city, which gave 34.5 per cent of available chlorine, even though the package had been broken in transitu.

Twenty samples of phenacetin were also purchased and examined, with the result that in one instance acetamid was found to have been substituted for the former preparation. As, however, this preparation is not recognized by the United States Pharmacopœia, and as it is not a patented medicine, compounded drug, or mixture whose formula is advertised, or printed, or written on the bottles, wrappers, or labels, it did not come within the provisions of the law relating to the adulteration of drugs, and no prosecution was, therefore, instituted.

In another instance a preparation was substituted on prescription for glycothymoline. This preparation, while not found in the pharmacopœia, and while it is not a patented medicine, is nevertheless a mixture, the composition of which is advertised in the medical journals, and in other ways, although not advertised on the bottles, nor on the wrappers, nor labels accompanying the bottles.

This case was submitted to the court for an interpretation on that point, in order to ascertain whether or not, the case came within the

law. The court decided that in order to bring the case within the meaning of the law it was essential that the advertisement should accompany the bottle. In view of this opinion no warrant was issued.

It will thus be seen that the law is, in this respect, very deficient, as it permits substitution in a large number of instances. The pharmacopœia is largely taken as the standard, or in other words covers the majority of drugs dispensed on prescription. Inasmuch, however, as this work is only revised once in about ten years it necessarily follows that there will be at times a number of well-known drugs in use that are not recognized by the pharmacopœia. In order to include such drugs within the meaning of the law it is essential that the section of the act relating to the adulteration of drugs should be amended by adding a fourth provision as follows: "If it is an imitation of, or sold under the name of another article." The law would then cover all cases of substitution and would correspond with that portion of the law relating to the sale of adulterated food products.

There is also one other amendment that might be made to this law without impairing its beneficial effect, and which would at the same time give protection to an honest dealer in the legitimate exercise of his calling. In the section of the act relating to the sale of drugs the following proviso is found which is omitted in that section of the act relating to the sale of food:

Provided, That if the defendant in any prosecution under this act, in respect to the sale of any such patented medicine, compounded drug, or mixture, shall prove to the satisfaction of the court that he had purchased the article in question as the same in nature, substance, and quality as that demanded of him by the purchaser, and with a written warranty to that effect; that he had no reason to believe at the time when he sold it that the article was otherwise, and that he sold it in the same state as when he purchased it, he shall be discharged from the prosecution.

As there seems to be no good reason why this provision should be confined exclusively to those who deal in drugs, I have the honor to recommend that the above provision, in the form of an amendment, be inserted in the section of the act relating to the sale of foods, excepting that the term food be substituted for patented medicine, compounded drug, or mixture.

Very respectfully submitted.

APPENDIX C.

REPORT OF THE INSPECTOR OF LIVE STOCK AND DAIRY FARMS.

SIR: I have the honor to submit the following report on the inspection of live stock, dairies, and dairy farms for the fiscal year ending June 30, 1901:

Number of dairy farms in District of Columbia.....	114
Number of inspections of dairy farms in the District of Columbia during fiscal year.....	446
Number of inspections of cows on dairy farms during fiscal year.....	5, 656
Number of cows condemned on dairy farms in the District of Columbia during fiscal year.....	26
Causes of condemnation:	
Tuberculosis.....	16
Mammitis.....	10
Number of dairies in the District of Columbia.....	381
Number of inspections of dairies in the District of Columbia during fiscal year.....	1, 248
Number of licensed dairy farms in Virginia supplying milk to Washington..	396
Number of inspections of Virginia dairy farms during fiscal year.....	344
Number of inspections of cows on Virginia dairy farms.....	6, 423
Number of cows condemned on Virginia dairy farms.....	158
Causes of condemnation:	
Tuberculosis.....	110
Mammitis.....	48
Number of licensed dairy farms in Maryland supplying milk to Washington..	331
Number of inspections of Maryland dairy farms during fiscal year.....	167
Number of inspections of cows on Maryland dairy farms.....	3, 380
Number of cows condemned on Maryland dairy farms.....	70
Causes of condemnation:	
Tuberculosis.....	32
Mammitis.....	38
Total number of dairy farms inspected during fiscal year.....	957
Total number of inspections of cows during fiscal year.....	15, 459
Total number of cows condemned during fiscal year.....	254
Number of inspections of slaughterhouses and stock yards during fiscal year..	80
Number of neat cattle, cows, and bulls inspected at stock yards.....	1, 447
Number of hogs inspected.....	2, 241
Number of sheep inspected.....	726
Number of calves inspected.....	141
Number of cows condemned as unfit for food.....	18
Number of hogs condemned as unfit for food.....	5

*The main efforts of the inspector of live-stock and dairy farms and the veterinary inspectors have been directed to the proper enforcement of the law regulating the sale of milk in the District of Columbia, and, as will be seen by the preceding table, very little work has been done at abattoirs and stock yards. Raw milk is the main food of a very large percentage of our population, this class being children, whose resistant qualities are weak and who succumb more readily to diseases of the digestive system; hence it is of paramount importance that the supply of milk be pure, clean, and from healthy cows kept under proper conditions.

That the majority of dairy farms are improving in sanitary condition there is no doubt. Constant and rigid inspection of these farms and the condemnation of animals showing physical signs of disease have been the causes of this improvement. That the improvement of the milk supply has a direct effect on the health of those whose sustenance depends principally on it can be shown by the statistics of this office. For five years (1890-1895) preceding the passage of the milk act the number of deaths from diarrheal diseases among children under 5 years of age was 1,905. During the five years the milk act has been in force the deaths from the same causes among children under 5 years of age have been 1,613, showing a decrease of over 15 per cent if the population had remained stationary, but the increase of the population makes this percentage too low.

There is no doubt that if the present milk law were replaced by a more stringent law the death rate of young children from diarrheal diseases would be greatly lessened. In those cities (and they are by far the most numerous) where dairy inspection consists in an inspection of the dealer's milk room and a chemical analysis of the milk, the enforcement of the law is an easy matter; but in this city, where so much importance is attached to the sanitary production of milk and the health of the cows, it is a very difficult law to enforce, and particularly so when we are working in two States. This is not a local difficulty, but one experienced wherever milk legislation is attempted and the law applied to the producers. A very large percentage of the licensed producers of milk are very indifferent and careless in obeying the dairy-farm regulations—keeping their cows, barns, and dairies in such a condition that notice for such violations have to be served on them at every inspection, yet the conditions are seldom bad enough to warrant the cancellation of their permits.

During the fiscal year the inspection of dairy farms has been extended to the distant parts of Virginia and Maryland through the appointment of an additional veterinary inspector, Dr. Hulbert Young, who has inspected nearly all the farms on the Bluemont division of the Southern Railroad. During this same period I was able to inspect all the dairy farms in Alexandria County, a part of Fairfax County, and all those farms on the Mount Vernon electric road. There remains to be inspected in Virginia those dairy farms adjacent to the Piedmont division of the Southern Railway, extending from Washington to Somerset. Several of these farms at Burkes, Fairfax, and Clifton stations have been inspected at various times. There are also a few dairy farms on the line of the Pennsylvania Railroad in Virginia, between Washington and Quantico, which have never been inspected.

In Maryland the dairy farms have been very generally inspected. Dr. Young has inspected all dairy farms from Frederick to Tuscarora.

Those in the neighborhood of Rockville, Derwood, Washington Grove, and Gaithersburg were inspected by me last year. For the next fiscal year Congress has given an additional veterinary inspector, who is to be stationed at Leesburg and who will devote his time to the inspection of those farms adjacent to the Bluemont division.

This section ships about one-fourth of all the milk used in Washington, and a regular inspection of these farms has been long sought for by this office.

Another inspector is needed along the line of the Piedmont division

of the Southern Railway, as the inspector at Leesburg is as far from these points as are our local inspectors. This inspector could also work along the line of the Pennsylvania Railroad in Virginia.

With a third inspector stationed between Rockville and Frederick, Md., the milk-producing sections of Maryland and Virginia could be very readily inspected, and the money expended on this country inspection would be most wisely spent. Of necessity these inspectors should be allowed traveling expenses on the railroad and hire of teams, as the inspector at Leesburg has many points 20 miles distant on the railroad and then a drive of 5 or 6 miles back into the country, each way, to find the dairy farms. Any regular inspection of the farms from Manassas to Somerset, Va., would be impracticable unless the inspector was given his traveling expenses at all times, as his territory covers 50 miles of railroad and the farms are very distant from each other.

While the far-distant farms are often negligent about complying with the dairy regulations, in one respect they excel the local farms, and that is the matter of cooling and aerating milk by approved coolers. Necessity has required them to adopt the latter in spite of their too frequent unwillingness. Far too many of our District farmers, and those in Maryland and Virginia adjacent to the city, do not cool their milk properly. I know of several farmers who bring in warm milk and endeavor to so serve it to their unenlightened customers.

That the proper lighting, ventilation, drainage, and cleansing of dairy barns has much to do with the health of the cows kept therein has always been urged by this department. During the past year Dr. Leonard Pearson, State veterinarian of Pennsylvania, has conducted two experiments bearing directly on the effects produced on healthy animals when exposed to tuberculous cows in a sanitary and unsanitary stable.

For the purpose of the investigation, 2 herds were established of 6 cows each. Four cows in each herd were healthy and 2 cows in each herd were tubercular. One herd was kept in a roomy, light, clean, and well-ventilated stable. The stalls and partitions between the mangers in this stable were so constructed that the cows were kept apart from each other. The other stable was small, close, poorly ventilated, rather dark, and not especially clean. The cows here were not separated by stall partitions, and they were all fed from the floor of the passageway in front of their stalls.

This experiment continued for five hundred and thirteen days or about seventeen months, and at the close it was found that 2 of the originally healthy animals kept in the large light stable had contracted tuberculosis, and the other 2 of the originally healthy cows continued sound. Of the 4 originally healthy cows in the small dark stable, all had contracted tuberculosis. The progress of the disease in each infected animal in the dark stable was greater than in the infected animals in the light airy stable. It is concluded from this experiment that:

(1) Good sanitary conditions, cleanliness, and the comparative isolation afforded by separate mangers and by stall partitions have a decided effect in restricting the spread of tuberculosis in an infected herd.

(2) A poorly ventilated and poorly lighted stable and one in which the cattle come into direct contact, as in the case when there are no partitions between the stalls and mangers, is favorable to the spread of tuberculosis in an infected herd.

(3) However good the construction and sanitary conditions of the stable and however good the care of the animals may be, the spread of tuberculosis can not be altogether prevented if tubercular cattle and healthy cattle are kept in the same stable. (Extract from Dr. Pearson's bulletin.)

The question of the disposal of condemned cows is a complex one. When a cow is condemned for local disease of the udder it frequently occurs that she goes to the abattoir and is used for meat. The dispo-

sition of the tuberculous cows as we most frequently see them is a very serious matter, being a double-edged sword cutting against both the farmer and the consumer. It seldom occurs that we find cows in the last emaciated stages of tuberculosis. The farmer as a rule gets rid of this kind before our inspection. But the fat tuberculous cow, to all external appearances in good health, which the trained ear of the inspector finds tuberculous and condemns, is the most serious menace to the farmer and consumer. We require the owner to dispose of her. She may be sold to another farmer, who is unaware of the condition of her lungs, and she becomes the focus of the disease in his herd. We have no authority to brand these cows or otherwise mark them and doubtless often pass them in other stables, where noises, not present when she was condemned, prevent us from hearing the pathological sounds in the lungs, and, seeing thousands of cows each year, we are unable to recognize her on sight. This occurs more frequently when some progressive farmer wishes to eradicate tuberculosis from his herd and has the tuberculin test applied and disposes of the cows which react to this test. This occurred during the past year in Virginia, where 26 cows were condemned on the tuberculin test from a herd of 42, and were probably scattered to as many different herds to spread infection, since the cows condemned did not show any marked physical symptoms of tuberculosis. Those who have the most experience among cattle place the most dependence on the tuberculin test and the least on a physical examination to determine the presence of tuberculosis. During the fiscal year a herd of 125 cows was examined by several of the best veterinarians in this country, and, while certain that most of the cows were tuberculous, they could only affirm to a very small number as diseased. The tuberculin test revealed 79 as being tuberculous, and in no case was this test a failure, as I personally killed and inspected every reacting cow and found some tuberculous lesion, varying in some cows from a focus the size of a pea in a lymphatic gland to other cows where the disease was generalized and miliary. The branding of diseased cows and the imposition of a heavy fine and cancellation of the permit for keeping such branded cows will alone be the means of disposing of this matter.

In this report I again renew my recommendation that an act of Congress be secured to control and stamp out tuberculosis among cows in the District of Columbia. For years we have been condemning cows wherever found with this disease and causing great loss to our farmers, who seldom appreciate the danger of a tuberculous cow unless she is emaciated, and who resent the condemnation of cows having this disease while the cows are in good flesh. I can see but little reason in condemning a tuberculous cow simply because she is thin and not condemning her when she is fat, since post-mortem examination too frequently reveals the fact that the fat cow is more generally diseased than the thin cow. Tuberculosis among cattle must be considered from two different aspects:

First. The danger of transmission of tuberculosis to the human by means of tuberculous meat and milk.

Second. The transmission of the disease from animal to animal and from herd to herd, or purely from the standpoint of animal industry.

As to the transmission of tuberculosis to the human by means of tuberculous meat and milk, the average citizen does not care for either as a food and is not willing to be experimented upon while scientific bodies are determining the issue.

The transmission of the disease from herd to herd is most momentous and destructive to live-stock interests, since tuberculosis is now a scourge among dairy cows in this dairy section and is spreading to the great cattle ranges of the West.

Pennsylvania, New York, New Jersey, Ohio, Massachusetts, and several other eastern States are now practically suppressing tuberculosis among cattle and are spending vast sums in tuberculin testing of cows and in paying owners for killing diseased cows which are destroyed to prevent the infection of healthy cows. Each State has quarantined against every other State and all cattle, save for slaughter, must be tuberculin tested and ear-marked before admission into the State. The District of Columbia, Maryland, and Virginia have not progressed thus far, hence we are very apt to get the scourings of many rejected herds. The District of Columbia should annually set aside a sum of money for the voluntary tuberculin testing of cows. I believe \$5,000 would go far toward eliminating this disease from our herds, by compensating owners for their losses and then quarantining all cows coming into the District until tuberculin tested by veterinarians indorsed by this office. No other system has worked so successfully as this, since the average farmer will not sacrifice his cows, although it may be to his own interest, unless compensated by the State, and the State owes it to the individual farmer for his sacrifice and to farmers in general in its endeavor to stamp out each center of infection.

Owners of cattle ought to prevent the contamination of calves and other animals still healthy.—Professor Bang.

City dairies.—There are now 381 licensed dairies in the District of Columbia. They vary in sanitary condition in about the same proportion as do the dairy farms. During the fiscal year I was ordered to inspect 93 dairies, either applicants or licensed dairies which were in need of inspection. During the fiscal year a great deal of improvement has been made in these dairies by Dr. Young, who has given much of his time to this work.

During the fiscal year the practice of requiring an analysis of all water used on dairy farms and in dairies that apply for permits in the District of Columbia has been continued. If this practice could be extended into Maryland and Virginia it would produce good results, and probably decrease the amount of typhoid fever in the District by infection through milk, the cans containing which having been washed with polluted water. The voluntary practice of some of our broad-minded physicians of reporting typhoid cases has enabled us during the last year to combat successfully several times what threatened to be serious outbreaks of typhoid fever. Inspections of the dairy farms where the milk was produced showed typhoid fever on three farms and sanitary conditions on others which were bad enough to suggest typhoid infection. The permits of these farms were immediately canceled and were not reissued until the farms were put in good condition.

There are dairy farms which are conducted on fairly good hygienic principles, with the exception of the tuberculin testing of their cows, yet there is no way for them to be officially indorsed, and it is very discouraging for such farmers when they receive no more pay or recognition for their clean milk than their shiftless, careless neighbor, and possibly not as much credit as the latter if the filthy farm happens to have Jersey cows, as is often the case, and produces milk high in butter fats, also high in filth, and frequently tubercle bacilli.

If this department would officially certify to the milk of those farmers who would guarantee to keep their herds free of disease, who would keep their farms and dairies in a sanitary condition, and cool and store the milk properly, I believe the public would be greatly benefited. Likewise the dairymen, because it would stimulate them to better efforts and would encourage the careful farmer and ruin the farmer who believes in and practices filthy methods in dairy husbandry.

CONTAGIOUS DISEASES IN THE DISTRICT.

Cattle tuberculosis is always with us, and has been treated at least the report on dairy farms.

Black leg, anthrax, and Texas fever are practically unknown in the District of Columbia. We have not been threatened with Texas fever since two years ago, at which time an outbreak occurred in Maryland close to the District line. The whole herd, with two exceptions, died, and the Maryland State veterinarian took prompt measures of suppression.

Glanders is becoming a rare disease in this city. During the last year we have not been aided in officially inspecting the horses. Since the War Department has ordered the Marine Hospital, glanders at the St. Asaph, Va., remount station, the most important center of infection to this city has ceased. The discontinuance of horse-car-street-railway lines has been another main factor in the reduction of this scourge.

Contagious cerebro-spinal meningitis, or farcy, is a disease common in Maryland and Virginia last fall and was seen in this city in the District along the border lines. The disease appeared in a fatal form and killed the horses usually within twelve or twenty-four hours.

Swine fever.—While our hog industry is not great, yet it is prosperous. It is necessary to guard against swine fever, which has narrowly escaped a serious epidemic which killed many hogs at Harrison City, Va., the western terminus of Long Bridge. The fever threw many of the head hogs into the river, but this was promptly suppressed by the attending veterinarian from this city. A number of cases of this disease are seen during the autumn and winter months along the bays at the stock yards, and they are immediately slaughtered, skinned, and made into soap.

Infection of horses is present all in the city, being common in trade in horses from the Western States, where the disease has been periodically introduced.

Trachoma.—There was a case of trachoma of the eye in a horse in the city. All these cases were treated by a veterinary surgeon, Dr. Augustus L. Brown.

Strangles.—This is a disease of horses of the head and throat, and is caused by a virus which is highly contagious. It is a disease which gives any marked attention to the horse and is a very serious one. It is a disease which should be kept constantly in the mind of the owner in view of a proper way to get rid of the disease and the danger of spreading it to other horses. It is a disease which is highly contagious and should be kept constantly in the mind of the owner. There are a number of cases in the District of Columbia, and it is a disease which should be kept constantly in the mind of the owner.

irregularly. Only two of these are fitted to slaughter cattle properly, and are kept clean and sanitary. The others are the usual types of the filthy, ill-smelling, country slaughterhouse—the usual center of infection for all animal parasitic diseases. At these small houses are killed the badly diseased dairy cows at odd times and hours. Our market inspectors are unable to condemn much of this diseased meat, as it is cut into small pieces to prevent detection, and of course the viscera are absent.

Hog slaughtering is done at five places in the District, three of these places being in fairly good sanitary condition. The establishment of an abattoir at Rosslyn, Va., has taken considerable animal slaughtering from our jurisdiction.

The question of providing healthy meat for citizens has been successfully solved in many cities, and resolves itself into the establishment of one central public abattoir, where all animals intended for human consumption shall be slaughtered under official supervision and the meat officially stamped. The sale of meat not bearing the stamp of either the District of Columbia or the United States ought to be prohibited. Farmers can bring in their meat quartered, with it the lungs, liver, and part of the diaphragm attached or pinned to the carcass, to some central station, where it can be inspected and stamped. This scheme is practical, and is in successful operation in other cities. The licensing of private abattoirs and the promulgation of regulations regarding sanitation and hours of killing would be a step in the right direction, but the traffic in the meat of diseased cows, hogs, and immature calves can never be prohibited entirely where slaughtering is done at several points unless the inspection force is sufficient to have an inspector at each abattoir.

One public abattoir, a competent meat inspector, and the stamping of all meat will solve this problem.

Respectfully,

JOHN P. TURNER, V. M. D.,
Inspector of Live Stock and Dairy Farms,
District of Columbia.

WILLIAM C. WOODWARD, M. D.,
Health Officer, District of Columbia.

If this department would officially certify to the milk of those farmers who would guarantee to keep their herds free of disease, who would keep their barns and dairies in a sanitary condition, and cool and store the milk properly, I believe the public would be greatly benefited; likewise the dairymen, because it would stimulate them to better efforts and would encourage the careful farmer and ruin the farmer who believes in and practices filthy methods in dairy husbandry.

CONTAGIOUS DISEASES IN THE DISTRICT.

Cattle tuberculosis is always with us, and has been treated of under the report on dairy farms.

Black leg, anthrax, and Texas fever are practically unknown in the District of Columbia. We have not been threatened with Texas fever since two years ago, at which time an outbreak occurred in Maryland, close to the District line. The whole herd, with two exceptions, died, and the Maryland State veterinarian took prompt measures of suppression.

Glanders is becoming a rare disease in this city. During the past year we have not been called in officially to inspect any suspicious horses. Since the War Department has adopted the Mallin test for glanders at the St. Asaph, Va., remount station, the most dangerous center of infection to this city has ceased. The discontinuance of horse-car street-railway lines has been another main factor in the elimination of this scourge.

Contagious cerebro-spinal meningitis or forage poisoning was epidemic in Maryland and Virginia last fall and was seen in many places in the District along the border lines. The disease appeared in a most fatal form and killed the horses usually within twelve to twenty-four hours.

Hog cholera.—While our hog industry is not great nor desirably prosperous, it is necessary to guard against cholera. Last winter we narrowly escaped a serious epidemic which killed many hogs at Jackson City, Va., the western terminus of Long Bridge. The owner threw many of the dead hogs into the river, but this was promptly suppressed by the attending veterinarian from this city. A few cases of this disease are seen during the autumn and winter months among the hogs at the stock yards, but they are immediately slaughtered, condemned, and made into fertilizer.

Influenza of horses is present all of the year, being spread by the traffic in horses from the Western States, where the large sale barns are permanently infected.

Rabies.—There were 11 cases of rabies of dogs during the fiscal year. All these cases were proven by subdural inoculations by the Bureau of Animal Industry.

Abattoir and meat inspection.—Owing to the great demand on my time, made necessary by dairy-farm inspection, I have been unable to give any marked attention to this very important work. One veterinary inspector should be kept constantly at this work, but he is sadly in need of a proper law to aid him in the same—not that we are unable to seize and tank diseased meat, but are unable to see the slaughtering at those vile places where the diseased dairy cows are sold. There are in operation in the District of Columbia twelve or fifteen slaughterhouses where cattle and cows are killed regularly and

irregularly. Only two of these are fitted to slaughter cattle properly, and are kept clean and sanitary. The others are the usual types of the filthy, ill-smelling, country slaughterhouse—the usual center of infection for all animal parasitic diseases. At these small houses are killed the badly diseased dairy cows at odd times and hours. Our market inspectors are unable to condemn much of this diseased meat, as it is cut into small pieces to prevent detection, and of course the viscera are absent.

Hog slaughtering is done at five places in the District, three of these places being in fairly good sanitary condition. The establishment of an abattoir at Rosslyn, Va., has taken considerable animal slaughtering from our jurisdiction.

The question of providing healthy meat for citizens has been successfully solved in many cities, and resolves itself into the establishment of one central public abattoir, where all animals intended for human consumption shall be slaughtered under official supervision and the meat officially stamped. The sale of meat not bearing the stamp of either the District of Columbia or the United States ought to be prohibited. Farmers can bring in their meat quartered, with it the lungs, liver, and part of the diaphragm attached or pinned to the carcass, to some central station, where it can be inspected and stamped. This scheme is practical, and is in successful operation in other cities. The licensing of private abattoirs and the promulgation of regulations regarding sanitation and hours of killing would be a step in the right direction, but the traffic in the meat of diseased cows, hogs, and immature calves can never be prohibited entirely where slaughtering is done at several points unless the inspection force is sufficient to have an inspector at each abattoir.

One public abattoir, a competent meat inspector, and the stamping of all meat will solve this problem.

Respectfully,

JOHN P. TURNER, V. M. D.,
Inspector of Live Stock and Dairy Farms,
District of Columbia.

WILLIAM C. WOODWARD, M. D.,
Health Officer, District of Columbia.

APPENDIX D.

REPORT OF PHYSICIAN IN CHARGE OF SMALLPOX HOSPITAL.

SIR: I have the honor to report as follows the operations of the smallpox hospital, District of Columbia, for the fiscal year ending June 30, 1901:

Number of cases on hand July 1, 1900	18
Number of cases admitted July 1, 1900, to June 30, 1901	67
Total to be accounted for	85
Discharged	84
Died	0
Remaining on hand June 30, 1901	1
Total	85

The cases admitted are classified as follows:

Diagnosis.	White.				Colored.				Total.
	Male.		Female.		Male.		Female.		
	Adults.	Children.	Adults.	Children.	Adults.	Children.	Adults.	Children.	
Varicella confluenta	1	0	0	0	4	0	0	1	6
Varicella semiconfluenta	0	0	2	0	10	0	2	0	14
Varicella discreta	3	1	0	0	19	4	10	3	40
Varicelloid	0	0	0	0	4	1	2	0	7
Total									67
Occurring after vaccination:									
Varicella confluenta									1
Varicella semiconfluenta									1
Varicella discreta									4
Varicelloid									4
Total									10

Vaccination history.

	Never.	Never before.	Never successfully.	Several years ago.	7 years ago.	40 years ago.	50 years ago.	Total.
Varicella confluenta	3	1	2	0	0	0	0	6
Varicella semiconfluenta	9	1	3	0	0	1	0	14
Varicella discreta	11	4	23	0	1	0	1	40
Varicelloid	0	4	1	1	1	0	0	7
Total	23	10	29	1	2	1	1	67

Not protected before attack, 62, or 92.53 per cent.

History of the outbreak.—The outbreak of smallpox of 1899 and 1900 necessitated keeping the hospital open until July 31, 1900, when, after a thorough disinfection and cleaning, it was closed. The health authorities, however, were not lulled into a sense of false security, for cases were occurring in the immediate counties of Maryland and Virginia, thereby causing much anxiety and increased vigilance.

It was not until November 1 that the first case was reported. A young white man whose infection originated in North Carolina, or from a young friend who came here from North Carolina about October 13 and stopped at one of the hotels. He had been sick with headache, other symptoms, and an eruption. As the symptoms in our case appeared October 29, sixteen days later, it is more probable the case originated from the friend rather than directly from the State of North Carolina. This case was mild in its nature.

On November 18 a case was reported at the Reform School in a colored youth who had been admitted from the District jail six days previously. His jail sentence had extended over a period of more than fifty days, and as he stoutly denied having received visitors during his term, I am at a loss in tracing his infection; but the known character of this class of patients compels me to disbelieve his statements as to total ignorance of the source of infection.

On November 22 a colored man was admitted from the Emergency Hospital, having been taken there directly from the brick yards at Holbrook, Va., across the Long Bridge. His infection arose from a case of supposed black measles in a camp near Cooper, W. Va. He stated that while in his shanty at the camp on November 3 a boy who was broken out came to see him and stopped some time. He left Cooper, went to Danville, and then to Holbrook. Symptoms appeared on the 16th; eruption on the 19th. The party at whose house he was stopping thinking he would die, sent him, on the 22d, to Washington on a brick wagon. His case was semiconfluent.

The State of Maryland, Halls Station, furnished the next case, which was admitted on the night of November 24. His first symptoms appeared on the 18th. This case was contracted from a boy sick with smallpox who was at a wedding celebration. He came to Washington on the electric cars and was semiconfluent.

The next case was admitted from quarantine station December 7, having been exposed to the case at the Emergency Hospital where the two men had been confined in the same room. His discharge would have been given him on December 7. The second vaccination, that of November 30, was taking when he was admitted to hospital. Diagnosis, semiconfluent.

A white man admitted on December 9 with confluent smallpox was exposed to the Halls Station case while on the cars. The trip was made during the rain and passengers were very much crowded. On the twelfth day symptoms appeared.

Another case traceable to the first case at the Emergency Hospital was admitted on December 11; a helper at the hospital, twelve days after exposure, developed symptoms which culminated in discrete smallpox on December 8.

The second case in the city due to the Halls Station case was discovered December 12, a relative of the patient, being semiconfluent.

On December 13 another relative of the Halls Station case was admitted with semiconfluent smallpox; symptoms appeared thirteen days after exposure. These last two cases had been at work.

A woman suffering from discrete smallpox was admitted December 14, having been taken sick December 8. The infection in this case is traced to two parties who came from West Virginia November 15, and stopped for a week at the house at which she was living. These parties had recently been sick with smallpox at one of the camps in that State. Her symptoms appeared seventeen days after exposure.

A man was found at the Baltimore and Potomac Railroad station December 22, having come to the city with a party of men en route from Turner, W. Va., to Richmond. In the camp where they were employed there had been many cases of smallpox. This man and all the others were supposed to have been seen by the camp physician on the night preceding their departure for their homes, pronounced well, bathed, given new clothing, the old clothing burned, and the men allowed to scatter. This man's case was convalescent from semiconfluent smallpox, and examination at the time showed scabs on the arms, legs, thighs, and feet, necessitating his detention at hospital eighteen days.

The fourth case traceable directly to Halls Station was admitted on January 2, 1901. He was exposed to his brother-in-law in December; moved to Washington December 28, after having been sick three days.

St. Marys County, Md., furnished a case on February 5.

A man reached Washington February 15 from North Carolina, having been exposed to his brother, who was sick with smallpox.

A case due to undiscovered cases was admitted February 18, suffering from a violent confluent type of smallpox. The man denied all knowledge of cases, but in a few days volunteered information which resulted in a discovery of the source of infection, as well as of other cases. The primary source of infection was admitted to hospital on December 12. A young man visited at the house of the case admitted on December 12, contracted the disease, infected his home and several of his friends; they in turn did likewise.

A case admitted February 4 from the county was due to infection at Oak Ridge, Va., by a supposed case of chicken pox, and as such had been attended by a physician. His symptoms appeared January 16, but he was not discovered until February 4, when a man living in the same house with him was reported sick. Other cases followed.

Cases whose origin could not be traced were admitted March 1 and 6.

A case admitted March 7 was due to exposure at Point of Rocks, Md.; the party infecting this man afterwards went to Baltimore for treatment.

A man admitted March 14, sick since March 9, came from Georgia; another man admitted the same night came from Prince George County, Md.

The case admitted April 4 came from Hinton, W. Va.

A case admitted May 30 was infected in New York City.

One admitted June 20 was infected by her sister, who was sick at Atlantic City and came to Washington before she was well.

Quarantine.—I believe in enforcing the strictest system of quarantine of all persons who have been exposed to smallpox infection, who fail to show evidence of protection by either an attack of the disease or a characteristic typical vaccination scar. Incomplete protection is as bad as no protection, and is never considered in dealing with this disease.

Domiciliary quarantine is very seldom satisfactory, since cases have developed in such premises, thereby increasing the length of isolation as well as adding materially to the expense of managing the disease, especially so when the municipal quarantine station is open.

That quarantine entails hardships and financial losses can not be denied; and these hardships and losses affect the working classes to a greater extent than the better classes of society, and induce the former to conceal cases of the disease which occur in their households until some accidental discovery reveals their presence. During the past three years many cases have been discovered too late to do more than order a thorough disinfection of goods and houses.

The legal period of quarantine in the District of Columbia is sixteen days. In my opinion, this period should be extended to twenty-one days, for the reason that should the infection remain dormant until the evening of the fifteenth day parents would conceal the onset of the sickness of their children, while the adult suspects would deny the presence of symptoms and maintain they were in perfect health. Case histories will corroborate these assertions. The practice at the quarantine station of taking every morning the temperature of each inmate prevents deception there, but in a domiciliary quarantine such temperature observations are rarely made.

Police powers for hospital employees.—Those employees of the smallpox hospital whose duties require them to remove patients and infected bedding should be allowed police powers and insignia, to be exercised and displayed only on duty. While there has never been any actual show of resistance exhibited on the part of those directly concerned, friends and acquaintances have several times proven a source of annoyance, and many parties who have been in direct contact with the sick have escaped from the premises and so caused special details for their apprehension and additional trips for the hospital wagons.

I believe when a suspect becomes a case, the inspector who makes the diagnosis should leave the driver in control of the premises, with orders to allow no one to leave, and prevent the entrance of parties whose curiosity may obtain the better of their judgment. This control could be enforced, did the driver possess the powers I indicate, during the time which elapses between the reporting to the health office and the temporary detail of a member of the police force, which would hardly exceed thirty minutes.

The janitor at the hospital at the present time does not possess the right to arrest and detain violators of the law at and about the hospital inclosure; he can simply order them away or go to the city and swear out a warrant. He should be clothed with the same powers that special officers possess, with the proviso that these powers are to be exercised only in connection with the smallpox hospital.

The classes with whom we have to deal generally respect the badge of authority.

The red-light treatment.—The treatment of smallpox with the red light has been tried at the hospital in several cases. Those patients who were so treated did not exhibit the high ranges of temperature ordinarily seen, the length of the sickness appeared shortened, nor did deep pitting follow. The light was introduced through red curtains and by means of red gas globes.

This method of treatment originated centuries ago with the Arabians. According to Copeman, John of Gaddesden, physician to Edward II.

and whose work, Rosa Anglica, appeared about the year 1320, gives a description of an attack of smallpox from which the King's son suffered. For this John treated him by wrapping him in a red cloth, and by entirely inclosing the bed in hangings of a red color, with the effect, he says, that no pitting of the skin resulted from the attack. Gaddesden says the treatment did not originate with him, but was suggested by former writers of the Arabian school.

That some virtue is to be found in the red light is attested by the Chinese. These people expose their children to smallpox, so that they may contract the disease, and they then rely upon red hangings for the main portion of the treatment. So far as my observations extend, very few are pitted to the same extent as are some of the white and negro patients treated by other methods.

In the future, should occasion arise for a further test of this treatment, it will be made upon a more extensive scale.

Approach to the hospital.—The roadway to the hospital through the grounds of the Washington Asylum should be closed against the ambulance and the disinfection wagon, and the B street approach, with the roadway across the reservation, put in good condition. In this way all danger of infection to the inmates of the asylum and the work-house will be prevented. The ambulance with patients and the wagon loaded with goods from infected houses have been compelled to follow in line with carts and wagons on account of the narrowness of the present roadway. They have also been driven in close proximity to prisoners. While no bad result has followed this course, it is impossible to say when infection will be traced to this common use of the road. Attempts have been made to correct this, but the road building has been done hurriedly and at improper seasons; therefore the first heavy rainstorms render the newly constructed roads impassable, by reason of washouts and mud.

Respectfully submitted.

LLEWELLYN ELIOT, M. D.,
Medical Inspector.

W. C. WOODWARD, M. D.,
Health Officer, District of Columbia.

APPENDIX E.

STATUS OF LEGISLATION RELATING TO PUBLIC HEALTH IN THE DISTRICT OF COLUMBIA AT THE CLOSE OF THE FIFTY-SIXTH CONGRESS.

A bill for preventing the adulteration, misbranding, and imitation of foods, beverages, candies, drugs, and condiments in the District of Columbia and the Territories, and for regulating interstate traffic therein, and for other purposes. S. 5262; referred to the Committee on Manufactures. H. R. 12973; referred to Committee on Interstate and Foreign Commerce.

A bill for the establishment of a food bureau in the Department of Agriculture, and for preventing the adulteration and misbranding of foods in the District of Columbia and the Territories, and for regulating interstate commerce therein, and for other purposes. H. R. 4618; referred to the Committee on Interstate and Foreign Commerce.

A bill to prevent the manufacture of adulterated foods. S. 2426; referred to the Committee on Manufactures and reported back with amendments (see S. Report 516).

A bill for the further prevention of cruelty to animals in the District of Columbia. S. 34; referred to the Committee on the District of Columbia.

A bill to prevent cruelty to certain animals in the District of Columbia. S. 2098; referred to the Committee on the District of Columbia.

A bill to restore medical freedom to the people of the District of Columbia. H. R. 1113; referred to the Committee on the District of Columbia.

A bill for a municipal hospital for the District of Columbia. S. 108; referred to the Committee on the District of Columbia. H. R. 7651; referred to the Committee on the District of Columbia.

A bill for the transformation of the inner basin of the Potomac flats into a public bathing pool. S. 1027; referred to the Committee on the District of Columbia and reported back with amendments (see S. Report 700).

A bill prohibiting bone or fertilizing factories to be operated in the District of Columbia. S. 3518; referred to the Committee on the District of Columbia. H. R. 8696; referred to the Committee on the District of Columbia.

A bill creating a commission for the condemnation of insanitary buildings in the District of Columbia, and for other purposes. S. 3120; referred to the Committee on the District of Columbia. H. R. 8305; referred to the Committee on the District of Columbia.

A bill for the regulation of scientific experiments upon human beings in the District of Columbia. S. 3424; referred to the Committee on the District of Columbia.

A bill to regulate the practice of veterinary medicine in the District of Columbia. H. R. 9148; referred to the Committee on the District of Columbia.

A bill to amend an act entitled "An act to regulate in the District of Columbia the disposal of certain refuse, and for other purposes," approved January 25, 1898. S. 3937; referred to the Committee on the District of Columbia, and reported back (see S. Report 971). H. R. 10231; referred to the Committee on the District of Columbia.

A bill to regulate the practice of homeopathic pharmacy in the District of Columbia. S. 4425; referred to the Committee on the District of Columbia, and reported back (see S. Report 1483). H. R. 10805; referred to the Committee on the District of Columbia.

A bill to invest the Washington Humane Society with the care, control, and management of the pound in and for the District of Columbia, and for other purposes. S. 4232; referred to the Committee on the District of Columbia.

A bill relating to the disposal of dead bodies in the District of Columbia. S. 4593; referred to the Committee on the District of Columbia.

A bill to regulate the production and sale of milk and cream in and for the District of Columbia. S. 4804; passed the Senate and referred to the House Committee on the District of Columbia.

A bill to require cases of typhoid fever occurring in the District of Columbia to be reported to the health department of said District. S. 4803; referred to the Committee on the District of Columbia. H. R. 14129; referred to the Committee on the District of Columbia.

A bill to provide for the construction of a filtration plant for purifying the Potomac water used in the District of Columbia without issuing interest-bearing bonds. H. R. 13256; referred to the Committee on the District of Columbia.

A bill to provide for an investigation into the sanitary conditions of the manufacture and sale of clothing in the District of Columbia. S. 5819; referred to the Committee on the District of Columbia.

A bill authorizing the Commissioners of the District of Columbia, subject to the approval and supervision of the Secretary of War, to enter into a contract or contracts for the dredging and improvement of the Anacostia River and the reclamation of its flats, from the line of the District of Columbia to the mouth of said river. H. R. 12164; referred to the Committee on Rivers and Harbors.

A bill to provide for the dikeage and drainage of the Anacostia flats above the Pennsylvania avenue bridge southeast without issuing interest-bearing bonds. H. R. 13265; referred to the Committee on the District of Columbia.

A bill to regulate the practice of barbering in the District of Columbia. H. R. 11969; referred to the Committee on the District of Columbia.

APPENDIX F.

STATEMENT OF DISEASES TREATED BY PHYSICIANS TO THE POOR.

Diseases treated by physicians to the poor during year ending June 30, 1901.

Diseases.	White.	Colored.	Total.	Diseases.	White.	Colored.	Total.

Tompkins, Edmund L.	1512 Q st. NW.	Wilkinson, Oscar.	315 Stewart Building.
Tompkins, George J.	Roanoke, Va.	Williams, Daniel H.	Chicago, Ill.
Toner, John E.	Government Hospital for the Insane.	Williams, Greene D.	1821 15th st. NW.
Trudgian, Josiah B.	222 G st. NE.	Williams, J. Buxton, jr.	Brookland, D. C.
Tubman, James R.	1222 11th st. NW.	Williams, Welton C.	1302 4th st. NW.
Tucker, William P.	2905 14th st. NW.	Williston, Edward D.	1434 T st. NW.
Turner, Molyneux.		Wilmer, William H.	1610 I st. NW.
Turner, Thos. J.	1403 17th st. NW.	Wilson, Anne A.	1451 Rhode Island ave. NW.
Tyler, Abbie C.	1126 12th st. NW.	Wilson, Lewes D.	316 B st. SE.
Tyler, Robert B.	Freedmen's Hospital.	Winter, Eugene C. C.	815 41 st. SW.
Upham, William C.	Langdon, D. C.	Winter, John T.	719 Mount Vernon sq.
Upshaw, Thomas L.		Wolfe, Edwin P.	
Vale, Frank P.	1327 L st. NW.	Wood, George W.	2904 P st. NW.
Van Rensselaer, John.	2 Thomas circle.	Woode, Charles H.	31 and F sts. SW.
Vaughn, Geo. T.	Marine-Hospital Service.	Woodman, Francis J.	634 A st. NE.
Vincent, Thomas N.	1224 N st. NW.	Woodward, H. Wells.	1114 New York ave. NW.
Von Ezzdorf, Rudolph H.	Marine-Hospital Service.	Woodward, William C.	568 I st. NW.
Wagner, Henry G.	1120 12th st. NE.	Woolen, L. J.	722 3d st. NE.
Wagner, Robert S.	Hartleton, Union Co., Pa.	Wooster, Mary L.	1443 Q st. NW.
Wagner, William F.	5th and L sts. NW.	Wooster, Walter M.	1443 Q st. NW.
Walker, Allen.	634 Whitney ave. NW.	Wright, George H.	Takoma Park, D. C., or Forest Glen, Md.
Walker, Louis A.	217 D st. NW.	Wright, Wilbur L.	926 F st. NW.
Walker, Mary E.	208 Indiana ave. NW.	Wurdemann, H. V.	Milwaukee, Wis.
Walker, Robert A.		Wynkoop, James C.	1308 Corcoran st. NW.
Walker, R. R.	Providence Hospital.	Yarnall, John H.	3028 P st. NW.
Walls, Joseph S.	934 B st. SW.	Yarrow, Henry C.	844 17th st. NW.
Wallace, C. Jaquins.	61 R st. NW.	Young, Glendie B.	1433 Corcoran st. NW.
Walls, George.	1623 Massachusetts ave. NW.	Young, Parke G.	1103 O st. NW.
Walsh, Ferdinand C.	1504 H st. NW.	Young, Samuel V.	12th and F sts. NW.
Walsh, John E.	200 East Capitol st.	Yount, Clarence E.	1625 14th st. NW.
Walsh, Ralph.	1501 H st. NW.	Zimmerman, Charles St. V.	
Walter, John.	1010 F st. NW.		
Walter, Leroy D.	1363 Maryland ave. NE.		
Walter, William F.	487 H st. SW.		

APPENDIX H.

BERTILLON CLASSIFICATION OF CAUSES OF DEATH.

INDEX TO THE INTERNATIONAL SYSTEM OF NOMENCLATURE OF DISEASES AND CAUSES OF DEATH (BERTILLON CLASSIFICATION) AS ADOPTED BY THE EIGHTH INTERNATIONAL CONGRESS OF HYGIENE AND DEMOGRAPHY, AND PUBLISHED IN THE SUPPLEMENT TO PUBLIC HEALTH REPORTS, DECEMBER 7, 1900.

Abortion (death of mother).....	VII, 134	Amateurism.....	II, 75
Abscess, bacillary.....	I, 33	Amblyopia.....	II, 75
by congestion.....	I, 31	by intoxication.....	II, 75
circumscribed.....	VII, 141	Amenorrhœa.....	VI, 130
cold.....	I, 31	Amnesia.....	II, 74
illac.....	V, 118	Amputation.....	IX, 148
not specifically described.....	VIII, 144	Amygdalitis.....	V, 101
of the breast (nonpuerperal).....	VI, 133	Amyloid kidneys.....	VI, 120
of the breast (puerperal).....	VII, 141	Amyotrophy.....	II, 63
of the fœces.....	V, 101	Anæmia.....	I, 54
of the frontal sinns.....	IX, 146	cerebral.....	II, 74
of the liver.....	V, 114	pernicious.....	I, 54
of the lungs.....	IV, 99	Anæsthesia.....	II, 74
of the margin of the anus.....	V, 109	Anasarca.....	XIV, 177
of the maxillary sinus.....	IX, 146	Anaspadias.....	X, 150
of the mediastinum.....	VIII, 144	Anatomical wounds.....	I, 20
of the nasal fossæ.....	IV, 87	Andromania.....	II, 68
of the pelvis.....	VI, 130	Aneurism.....	III, 81
of the retropharynx.....	V, 101	Angiectasis.....	III, 86
of the throat.....	V, 101	Angiectopia.....	III, 86
of the vulvo-vaginal glands.....	VI, 132	Angina, buffy.....	I, 9
cessifluent.....	I, 31	diphtheritic.....	I, 9
perinephritic.....	VI, 121	infectious.....	I, 9
peri-uterine.....	VI, 130	malignant.....	I, 9
retro-uterine.....	VI, 130	not specifically described.....	V, 101
urinary.....	VI, 124	pectoris.....	III, 80
uterine.....	VI, 130	pseudo-membranous.....	I, 9
warm.....	VIII, 144	syphilitic.....	I, 36
Absinthæmia.....	I, 56	toxic.....	I, 9
Absinthism.....	I, 56	Angiolencitis.....	III, 84
Absorption of ammonium sulphide.....	XIII, 174	Angioma.....	I, 46
sulphuric acid or other.....		Ankylosis.....	IX, 147
corrosive substances.....		Ankylostomes.....	V, 107
(accidental).....	XIII, 175	Ankylostomia.....	VI, 124
Acrozo pernicioso.....	I, 4	Anomaly.....	X, 150
Accidental falls.....	XIII, 166	Anthrax.....	I, 22
submersion.....	XIII, 172	Antimony cholera.....	XIII, 175
Accidents, cerebral.....	II, 74	Anuria.....	VI, 121
not specifically described.....	XIII, 176	Anus, abscess of the margin of.....	V, 109
of labor, not specifically.....		artificial, when nature is not.....	
classified.....	VII, 136	specified.....	V, 108
primary.....	I, 36	and fecal fistulas, diseases of the.....	V, 109
railroad, not including sui-.....		fissure of the.....	V, 109
cide.....	XIII, 166	fistula of the, either fecal or reto-.....	
Acholia (when precise nature is not in-.....		vaginal.....	V, 109
dicated).....		imperforated.....	X, 150
Acrodynia.....	V, 114	Aortic affections.....	III, 79
Acromegalia.....	I, 19	ectasis.....	III, 81
Actinomyces.....	I, 55	lesion.....	III, 79
Addison's disease.....	I, 24	Aortitis.....	III, 81
Adenitis, suppurative.....	I, 52	Apepsia.....	V, 104
Adenoid vegetations.....	VIII, 144	Aphasia.....	II, 74
Adenoma.....	IV, 87	Aphaxia.....	II, 75
Adenopathia.....	I, 46	Aphonia.....	IV, 88
Adeno-phlegmon.....	III, 84	Aptha.....	VIII, 145
Adynamia.....	VIII, 144	Apoplexy.....	II, 64
Affections of the arteries.....	XIV, 179	cerebral.....	II, 64
Age, old.....	III, 81	meningeal.....	II, 64
Albuminuria.....	XII, 154	serous.....	II, 64
Alcoholic delirium.....	VI, 120	Appendicitis.....	V, 118
dementia.....	I, 56	Arcus senilis.....	II, 75
intoxication.....	I, 56	Arteriectasis.....	III, 81
Alcoholism, acute.....	I, 56	Arteries, affections of the.....	III, 81
chronic.....	I, 56	atheroma of.....	III, 81
Alienation, not specifically described.....	II, 68	Arteriosclerosis.....	III, 81

¹Include under this title only those cases in which the lesion, the cause for amputation, is not specified.

Bertillon classification of causes of death—Continued.

Arteritis.....	III, 81	Broncho-alveolitis.....	IV, 90
Arthralgia.....	IX, 147	Bronchorrhagia (when nature is not indicated).....	IV, 99
Arthritis.....	IX, 147	Bronchorrhœa.....	IV, 91
deformans.....	I, 48	Bubo.....	I, 36
not specifically described tuberculous and rheumatic excepted.....	IX, 147	absorption of.....	I, 36
Arthrocele.....	IX, 147	not specifically described.....	VIII, 141
Arthrodynia.....	IX, 147	of soft chancre.....	I, 36
Arthrophtyis.....	IX, 147	suppurating.....	VIII, 141
Ascaris lumbricoides.....	V, 107	venereal.....	I, 36
Ascites.....	XIV, 177	Buccal cavity, malignant tumors of.....	I, 39
Asphyxia, accidental (pathological asphyxia and suicidal asphyxia excepted).....	XIII, 174	Buffy angina.....	I, 9
by stoves (fixed or portable).....	XIII, 174	Bub, affections of the.....	II, 63
cyanotic (without indicated cause, the newborn excepted).....	XIV, 179	Burns.....	XIII, 167
Asthenia.....	XIV, 179	from corrosive substances.....	XIII, 168
Asthenic.....	XIV, 179	from petroleum.....	XIII, 167
Asthma.....	IV, 97	from steam.....	XIII, 167
cardiac.....	III, 79	by vitriol.....	XIII, 168
Asystole.....	XIV, 179	Button, Aleppo.....	VIII, 115
Ataxo-dynamia.....	XI, 151	biskra.....	VIII, 115
Atelectasis of the lungs in the newborn.....	II, 64	medina.....	VIII, 115
Atheroma, cerebral.....	III, 81	Cachexia, malarial.....	I, 4
of arteries.....	II, 74	of adults.....	XIV, 179
Athetosis.....	V, 105	of the old.....	XII, 154
Athrepsia, over 2 years old.....	V, 105	perniciosis.....	I, 4
under 2 years old.....	XI, 151	Cæsarian section.....	VII, 136
Atrophy (infantile).....	II, 63	Calcular affections.....	VI, 122
progressive muscular.....	II, 76	Calculi, biliary.....	V, 113
Auditory canal, obstruction of the.....	I, 55	intestinal.....	V, 109
Autointoxication.....	I, 33	of the urinary tract.....	VI, 122
Bacillary abscess.....	I, 27	Calculus, nephritic.....	VI, 122
Bacillosis.....	I, 37	ureteral.....	VI, 122
Balanitis.....	I, 37	vesical.....	VI, 122
Balanoposthitis.....	I, 37	Cancer.....	I, 39
Balanorrhagia.....	I, 51	abdominal.....	I, 45
Basedow's disease.....	II, 73	of bone.....	I, 45
Bergeron's disease.....	I, 19	of the anus.....	I, 41
Beri-beri.....	V, 113	of the bladder.....	I, 45
Biliary lithiasis.....	XI, 151	of the breast.....	I, 43
Birth, premature.....	XIII, 166	of the cardia.....	I, 40
Bites, nonvenomous.....	XIII, 166	of the colon.....	I, 41
nonvirulent.....	XIII, 175	of the ear.....	I, 41
of serpents.....	VI, 123	of the face.....	I, 12
Bladder, diseases of.....	VI, 123	of the female genital organs.....	I, 41
paralysis of.....	VI, 123	of the intestines.....	I, 45
tenesmus of.....	VI, 123	of the kidney.....	I, 39
Blennorrhagia of the adult.....	I, 37	of the lips.....	I, 40
Blennorrhœa.....	I, 37	of the liver.....	I, 45
Blepharitis.....	II, 75	of the lung.....	I, 39
serpiginous.....	II, 75	of the maxilla.....	I, 39
Blepharo-conjunctivitis.....	II, 75	of the month.....	I, 40
Blepharo-phimosis.....	II, 75	of the œsophagus.....	I, 41
Blepharoplastia.....	II, 75	of the peritoneum.....	I, 45
Blindness, congenital.....	X, 150	of the prostate.....	I, 40
Blood, spitting of (when nature is not indicated).....	IV, 99	of the pylorus.....	I, 41
Bone, softening of.....	IX, 146	of the rectum.....	I, 39
Bones, affections of the.....	IX, 146	of the roof of the month.....	I, 41
Boninia.....	II, 74	of the skin.....	I, 40
Breast, abscess of, nonpuerperal.....	I, 33	of the stomach.....	I, 39
puerperal.....	VII, 141	of the tongue.....	I, 42
amputation of.....	VI, 133	of the uterus.....	I, 42
cyst of the.....	VI, 133	of the vagina.....	I, 39
nonpuerperal diseases of the (cancer excepted).....	VI, 133	of the velum of the palate.....	I, 42
Bright's disease.....	VI, 120	of the vulva.....	I, 42
Broad ligament, phlegmon of.....	VII, 137	of the womb.....	I, 45
Bronchiectasis.....	IV, 91	Cancerous goiter.....	I, 15
Bronchitis, acute.....	IV, 90	Cancer, pelvic.....	I, 39
bacillary.....	I, 27	smoker's.....	I, 41
bronchial.....	IV, 91	Canceroid, not specifically described.....	I, 11
capillary.....	IV, 90	of the anus.....	I, 43
chronic.....	IV, 91	of the breast.....	I, 41
fetid.....	IV, 96	of the colon.....	I, 39
granular.....	I, 27	of the lips.....	I, 39
heteroplastic.....	I, 27	of the maxilla.....	I, 39
mucous.....	IV, 91	of the nipple.....	I, 39
neoplastic.....	I, 27	of the roof of the month.....	I, 39
pituitous.....	IV, 91	of the tongue.....	I, 42
pseudo-membranous.....	I, 9	of the uterus.....	I, 42
pulmonary.....	IV, 91	of the vagina.....	I, 39
specific.....	I, 27	of the velum of the palate.....	I, 42
suffocating.....	IV, 91	of the vulva.....	I, 42
		of the womb.....	I, 45
		Carcinoma of the abdomen.....	I, 41
		of the anus.....	I, 45
		of the bladder.....	I, 41
		of the breast.....	I, 40
		of the cardia.....	

Bertillon classification of causes of death—Continued.

Carcinoma of the colon	I, 41	Cirrhosis, alcoholic	V, 112
of the kidney	I, 45	biliary	V, 112
of the lips	I, 39	interstitial	V, 112
of the lung	I, 45	not specifically described	V, 112
of the maxilla	I, 39	of the liver	V, 112
of the neck	I, 45	Cleft palate	X, 150
of the nipple	I, 43	Club foot, congenital	X, 150
of the oesophagus	I, 40	Cocainism, habit of	I, 59
of the plevia	I, 45	Cold abscess	I, 31
of the prostate	I, 45	Cold, common	IV, 87
of the pylorus	I, 40	Colic, flatulent, of adults	V, 106
of the roof of the mouth	I, 39	from worms	V, 107
of the tongue	I, 39	hepatic	V, 113
of the uterus	I, 42	hernial	V, 108
of the vagina	I, 42	inflammatory	V, 106
of the velum of the palate	I, 39	intestinal	V, 106
of the vulva	I, 42	lead	I, 57
of the womb	I, 42	nephritic	VI, 122
Carbonic oxide, absorption of	XIII, 174	Colitis of adults	V, 106
Cardiac accidents (undetermined)	III, 86	Colloid tumor of the uterus	I, 42
affection	III, 79	vagina	I, 42
cachexia	III, 79	vulva	I, 42
insufficiency of the valves of		womb	I, 42
the heart	III, 79	Coloboma irides	II, 75
lesion	III, 79	Coma, not specifically described	XIV, 179
palpitations	III, 79	Concussion of the brain, accidental	XIII, 166
stenosis of the valves of the		homicidal	XIII, 166
heart	III, 79	Conflagration	XIII, 174
Cardialgia	III, 80	Congenital club foot	X, 150
Cardiastasis	III, 79	debility	XI, 151
Cardiomalacia	III, 79	Conjunctival diphtheria	I, 9
Cardiopathy	III, 79	Conjunctivitis, blennorrhagic, of the	
Cardio-pericarditis	III, 77	child	I, 38
Cardiorrhexia	III, 79	follicular	II, 75
Cardiosclerosis	III, 79	gonorrhœal, of the child	
Cardiostenosis	III, 79	(not including diphthe-	
Cardio-vascular sclerosis	III, 79	ritic conjunctivitis) ..	II, 75
Caries	IX, 146	of the adult	I, 37
dental	V, 100	Constipation	V, 109
Castration, in man	VI, 126	Consumption, pulmonary	I, 27
in the female	VI, 131	Contracture	II, 74
Catalepsy	II, 74	Contractures of children	II, 71
Cataleptia	II, 64	Contusion, accidental	III, 166
Cataract	II, 75	Convulsions of children	II, 71
Catarrh, not specifically described	IV, 91	Cord, amyloid degeneration of the	II, 63
Causes, ill defined, of death	XIV, 179	compression of the	II, 63
Cephalotripsy	VII, 136	disease of the	II, 63
Cerebral anaemia	II, 74	Cornea, diseases of the	II, 75
compression	II, 74	Coryza	IV, 87
congestion	II, 64	Coxalgia	I, 32
effusion	II, 64	Cretinism	II, 74
hemorrhage	II, 64	Croup	I, 9
softening	II, 65	false	IV, 88
Cervico-facial cancer	I, 44	spasmodic	IV, 88
Chalazion	II, 75	stridulous	IV, 88
Chancre, indurated	I, 36	Crushing	XIII, 166
infecting	I, 36	Cryptorchid	X, 150
of the face	I, 36	Curvature, organs of locomotion	IX, 149
of the month	I, 36	Cyanosis of the new born	XI, 152
phagedenic	I, 36	Cyphosis	IX, 146
simple	I, 36	Cystitis, acute or chronic	VI, 123
soft	I, 36	gonorrhœal	I, 37
Chancercle	I, 36	Cystocèle	VI, 123
Chancroid	I, 36	Cystoma	I, 46
Charbon, malignant (anthrax)	I, 22	Cystoptosis	VI, 123
Charcot's disease	II, 63	Cystorrhagia	VI, 123
Cheloids	VIII, 145	Cystotomy	VI, 123
Chloroform, absorption of	XIII, 174	Cystoerici	I, 24
Cholecystitis	V, 114	Dacryostitis	II, 75
Cholemia, not specifically described	V, 114	Dacrolithiasis	II, 75
Cholera, antimony	XIII, 175	Dacryadenitis	II, 75
Asiatic	I, 12	Dacryoma	II, 75
epidemic	I, 12	Deaf-mutism	II, 76
Indian	I, 12	Deafness, congenital	X, 150
infantum	I, 12	not specifically described	II, 76
nostras	V, 105	Death, ill defined or unspecified causes of	
sporadic	I, 13	sudden, from causes not stated ..	XIV, 178
Cholera	I, 13	Debility, congenital	XI, 151
Cholitis	I, 13	of adults	XIV, 179
Choluria	V, 114	senile	XII, 154
Chondroma	V, 114	Degeneration, generalized fatty	I, 55
Chorea	I, 46	Delirium tremens	I, 56
Choroid, diseases of the	II, 73	Delusions of persecutions	II, 68
Choroiditis	II, 75	Dementia, alcoholic	I, 56
Circulatory apparatus, affections of the		apoplectic	II, 64
(not specifically		choreic	II, 73
described) ..	III, 86	not specifically described ..	II, 68
diseases of the ..	III	senile	XII, 151
		Dermatitis	VIII, 145

Bertillon classification of causes of death—Continued.

Development, arrest of	X, 150	Epilepsy, Jacksonian	II, 74
Diabetes	I, 50	symptomatic	II, 74
Diagnosis, any insufficient	XIV, 179	Epileptiform convulsions (of adults)	II, 70
Diarrhea, children under 2 years	V, 105	of women in labor	VII, 138
of adults, 2 years and over	V, 106	Epiphyses, separation of the	XIII, 164
Diffuse phlegmon	VIII, 144	Epiptoitis	V, 116
Digestive apparatus, affections of, not specifically described (cancer and tubercle excepted)	V, 117	Epistaxis	III, 85
Digestive apparatus, diseases of the	V	Epithelioma	I, 44
Dilatation of the bronchi	IV, 91	of the anus	I, 41
Diphtheria	I, 9	of the breast	I, 43
and croup	I, 9	of the colon	I, 41
buccal	I, 9	of the lips	I, 39
conjunctival	I, 9	of the maxilla	I, 39
cutaneous	I, 9	of the mouth	I, 39
of wounds	I, 9	of the nipple	I, 43
Dipsomania	I, 56	of the roof of the mouth	I, 39
Disarticulation	IX, 149	of the tongue	I, 39
Dothienteritis	Ia	of the uterus	I, 12
Drop, military	I, 37	of the vagina	I, 42
Dropsy	XIV, 177	of the velum of the palate	I, 39
Drowning, non-suicidal	XIII, 172	of the vulva	I, 42
suicidal	XIII, 158	of the womb	I, 42
Drunkennes	I, 56	Epitheliomatous tumor (not specifically described)	I, 44
Duchenne's disease	II, 62	Epididymitis	V, 100
Dupuytren's disease	IX, 149	Ergotism, acute	XIII, 175
Dysentery	I, 14	chronic	I, 59
Chinese	I, 14	Eruption of measles	I, 6
choleric	I, 14	Erysipelas	I, 18
epidemic	I, 14	gangrenous	VIII, 144
of tropical countries	I, 14	medical (without regard to seat)	I, 18
Dysmenorrhea	VI, 130	phlegmonous	VIII, 144
Dyspepsia	V, 104	surgical (without regard to seat)	I, 18
Dystocia	VII, 136	Erythema	VIII, 145
Dysuria	VI, 123	Eschar	VIII, 142
Ear, catarrh of the	II, 76	Esthiomene, specifically described	I, 33
diseases of the	II, 76	Ethylism	I, 56
lack of	XI, 153	Eversion, congenital	X, 150
Echinococci	V, 111	traumatic	XIII, 166
Eclampsia (nonpuerperal)	II, 70	Exhaustion (of adults)	XIV, 179
of women in labor	VII, 138	Exomphalos	X, 150
of young children	II, 71	Exophthalmia	I, 51
Ethyma, specifically described	VIII, 145	Exophthalmic cachexia	I, 51
Ectopia	X, 150	goitre	I, 36
Ectropion, specifically described	II, 75	Exostoses	I, 36
Eczema	VIII, 145	Exostosis (not specifically described)	IX, 142
Electrical disturbances	XIII, 171	External causes, affections produced by	XIII
Elephantiasis arabum	VIII, 145	Eye, diseases of the, and its adnexa	II, 75
gracorum	I, 17	nonvenereal diseases of the genital organs of the	VI, 126
Embryotomy (adult)	VII, 136	paralysis of the muscles of the	II, 75
Empyema, not specifically described	IV, 98	parasites of the	XIII, 166
Emprosthotonos	II, 72	Falls, accidental	I, 21
Empyema	IV, 94	Farey	I, 21
Encephalitis	II, 60	Fatigue, prostration by	XIII, 173
Encephalocele	X, 150	Fatty degeneration, amyloid	I, 55
Encephaloid of the abdomen	I, 45	of arteries	III, 81
anus	I, 41	of the cord	II, 63
bladder	I, 45	of the kidney	VI, 120

Treatment, bad (upon a child).....	XIII, 176	of the neck (of the womb).....	VI, 127
Trematodes.....	V, 107	Uleer, Cochin-China.....	VI, 145
Trichiasis.....	II, 75	of the abdomen, cancerous.....	I, 45
Trichinosis.....	I, 24	of the bladder, cancerous.....	I, 45
Tricecephalus.....	V, 107	of the kidney, cancerous.....	I, 45
Tricuspidal affection.....	III, 79	of the lung, cancerous.....	I, 45
lesion.....	III, 79	of the neck, cancerous.....	I, 45
Trismus naseentium.....	II, 72	of the pelvis, cancerous.....	I, 45
Tropho-neuroses.....	VIII, 145	of the prostate, cancerous.....	I, 45
Tubercle, abdominal.....	I, 29	of the stomach.....	V, 103
of the larynx.....	I, 26	of the uterus.....	VI, 127
of the lungs.....	I, 27	pendine.....	VIII, 145
of the meninges.....	I, 28	round.....	V, 103
Tuberculosis, generalized.....	I, 34	tuberculous.....	I, 33
meningeal.....	I, 28	varicose.....	III, 83
not specifically described.....	I, 27	Ulorrhagia.....	V, 100
of the skin.....	I, 33	Umbilicus, inflammation of the.....	XI, 152
osseous.....	I, 33	Unsoundness of mind.....	II, 68
showing itself simultaneously in many two or more organs.....	I, 34	Uræmia (when precise nature is not indicated).....	VI, 120
Tuberculous affections, other.....	I, 33	Uræmic coma (when precise nature is not indicated).....	VI, 120
laryngitis.....	I, 26	delirium (when precise nature is not indicated).....	VI, 120
nephritis.....	I, 33	eclampsia (when precise nature is not indicated).....	VI, 120
peritonitis.....	I, 29	Urethra, diseases of the.....	VI, 121
Tumor, abdominal.....	I, 46	stricture of the.....	VI, 121
aneurismal.....	III, 81	Urethral fistula.....	VI, 121
of the neck, cancerous.....	I, 45	Urethralgia.....	VI, 121
cerebral.....	II, 74	Urethritis.....	I, 37
cranial.....	IX, 146	Urethroplasty.....	VI, 121
encephaloid of the cardia.....	I, 40	Urethro-rectal fistula.....	VI, 121
encephaloid of the œsophagus.....	I, 40	Urethrorrhaphy.....	VI, 121
cretile.....	I, 46	Urethrorrhagia.....	VI, 121
fibroid.....	VI, 129	Urethrostenosis.....	VI, 121
intestinal.....	I, 46	Urethrotomy.....	I, 37
malignant, of the kidney.....	I, 45	Urinæ, ardor.....	VI, 121
malignant, of the lung.....	I, 45	Urinaemia.....	VI, 122
malignant, of the neck.....	I, 45	Urinary calculus.....	VI, 121
malignant, of the pelvis.....	I, 45	fistula.....	VI, 121
malignant, of the prostate.....	I, 45	infiltration.....	VI, 121
not specifically described.....	I, 46	intoxication.....	VI, 122
of the abdomen, malignant.....	I, 45	lithiasis.....	VI, 122
of the bladder.....	VI, 123	Urine, incontinence of.....	VI, 123
of the bladder, malignant.....	I, 45	retention of.....	VIII, 145
of the breast (noncancerous).....	VI, 133	Urticaria.....	VI, 125
of the breast, not specifically described.....	VI, 133	Uterine hemorrhage, nonpuerperal.....	VII, 136
of the cardia, colloid.....	I, 40	inversion.....	VI, 130
of the liver (when precise nature is not indicated).....	V, 114	or vaginal catarrh.....	VI, 129
of the œsophagus, colloid.....	I, 40	polypus.....	VI, 130
of the pylorus, colloid.....	I, 40	prolongation.....	VI, 130
of the pylorus, encephaloid.....	I, 40	Uterus, ablation of the.....	VI, 130
of the stomach.....	I, 40	antiflexion of the.....	VI, 130
osseous.....	IX, 146	antiversion of the.....	I, 42
parotid.....	V, 100	cancer.....	VI, 130
phlegmonous.....	VIII, 144	deviation of the.....	VI, 130
uterine (not cancerous).....	VI, 129	falling of the.....	VI, 129
vascular.....	I, 46	fibroid body of the.....	VI, 129
Tumors, hydatid, of the liver.....	V, 111	fungus or fungoid tumors of the.....	VI, 130
malignant, of the intestines.....	I, 41	hypertrophy of the neck of the.....	VI, 130
malignant, of the liver.....	I, 40	organic lesion of the.....	VI, 130
malignant, of the peritoneum.....	I, 41	other diseases of the.....	VI, 130
malignant, of the rectum.....	I, 41	prolapse of the.....	VI, 130
		retroflexion of the.....	VI, 130
		rupture of the.....	VII, 136

Bertillon classification of causes of death—Continued.

Cyula, elongation of the.....	V, 101	Virulent disease (without explanation).....	I, 55
Vagina, prolapse of the.....	VI, 130	Visceral steatosis.....	I, 55
Vaginismus.....	VI, 132	Voice, loss of.....	IV, 88
Vaginitis.....	I, 37	Voluntary absorption of sulphuric acid (or any other corrosive substance)...	XIII, 155
Valgum, genu.....	IX, 147	Volvulus.....	V, 108
Valgus talipes, congenital.....	X, 150	Vomica (without any other indication).....	VIII, 144
Valves of the heart, valvular insufficiency of the.....	III, 79	Vomiting, incoercible.....	VII, 134
Valves of the heart, valvular stenosis of the.....	III, 79	stercoraceous (when nature is not specified).....	V, 108
Varicella.....	I, 19	Vomito negro.....	I, 36
Varices.....	III, 83	Vulvitis.....	VI, 132
Varicocele.....	III, 83	gonorrhoeal, of the child.....	I, 38
Varicella.....	I, 5	Vulvo-vaginal glands, tumors of.....	VI, 132
Vascular nevus.....	X, 150	Wardrop's disease.....	VIII, 145
Veins, affections of.....	III, 83	Warm abscess.....	VIII, 144
Vehni palati, paralysis of the.....	V, 101	Weil's disease.....	V, 110
Venereal buboes.....	I, 36	Wen.....	I, 46
Venom, absorption of.....	XIII, 175	Werthoff's disease.....	I, 49
Version.....	VII, 136	White flux, flowers (whites, vaginal flow).....	VI, 130
Vertebral caries.....	I, 30	White swelling.....	I, 32
disease.....	I, 30	Whitlow.....	VIII, 144
polyarthritidis.....	I, 30	Whooping cough.....	I, 8
Vertigo.....	II, 74	Worm, solitary.....	V, 107
Vertigo ab aure laeso.....	II, 76	Wounds, anatomical.....	I, 20
Vertigo, Meniere's disease.....	II, 76	by cutting instruments (suicide not demonstrated).....	XIII, 166
Vesical inertia.....	VI, 123	by firearms.....	XIII, 166
or ureteral catarrh.....	VI, 123	Xerophthalmia.....	II, 75
Vesico-metro-rectal fistula.....	VI, 124	Xerosis.....	II, 75
Vesico-rectal fistula.....	VI, 124	Zona.....	VIII, 145
Vessels, affections of the great.....	III, 86

REPORT OF THE HEALTH OFFICER.

197

TABLE II.—Statement showing the mortality from ten prominent diseases, by months, during the decade ended December 31, 1900.

Diseases.	January.	February.	March.	April.	May.	June.	July.	August.
Pneumonia.....	630	613	703	622	298	265	90	108
Bronchitis.....	163	168	182	136	101	73	62	40
Congestion of lungs.....	122	113	113	103	63	34	19	20
Phthisis pulmonalis.....	592	613	577	630	561	450	517	460
Diphtheria.....	105	78	52	40	65	75	73	72
Scarlet fever.....	27	38	64	53	42	30	3	10
Measles.....	59	92	89	59	39	18	20	3
Whooping cough.....	27	29	34	29	47	97	124	107
Diarrheal diseases.....	62	28	51	47	55	890	1,445	748
Typhoid fever.....	83	50	44	60	49	96	105	217

Diseases.	September.	October.	November.	December.	Total.	Monthly average.	Month of maximum intensity.
Pneumonia.....	118	213	294	417	4,371	364.2	March.
Bronchitis.....	53	74	76	119	1,247	103.9	Do.
Congestion of lungs.....	33	56	69	79	824	68.6	January.
Phthisis pulmonalis.....	485	550	496	537	6,468	539.0	April.
Diphtheria.....	132	152	158	122	1,124	93.7	November
Scarlet fever.....	14	14	17	16	328	27.3	March.
Measles.....	6	2	0	20	407	33.9	February.
Whooping cough.....	88	55	20	41	698	58.2	July.
Diarrheal diseases.....	454	216	62	59	4,117	343.1	Do.
Typhoid fever.....	268	286	205	236	1,699	141.6	October.

TABLE III.—Deaths under 1 year of age, arranged by months, for the year ended June 30, 1901.

	1 day and under.	1 day to 1 week.	1 week to 1 month.	1 to 2 months.	2 to 3 months.	3 to 4 months.	4 to 5 months.	5 to 6 months.	6 to 7 months.	7 to 8 months.	8 to 9 months.	9 to 10 months.	10 to 11 months.	11 to 12 months.	Total.	Total by color.

INDEX.

	Page.
Acts. (<i>See</i> Index to laws relating to public health, report 1900, p. 20.)	
Abatement of nuisance	21
Abattoirs, inspections of	48
Abscess of liver, deaths from, Table I	148
Accidents:	
Deaths due to	12
Deaths, percentages, etc., Table I	176
Adenitis, deaths, percentages, etc., Table I	162
Adulteration of—	
Butter	40
Cider	40
Olive oil	40
Lard	40
Vinegar	40
Adulterations of food, bill to prevent, status of	57
Age, death due to old	12
Ages of decedents, average	8
Albuminuria:	
Nonpuerperal, deaths from, Table I	162
Puerperal, deaths from, Table I	161
Alcoholism:	
Deaths from, Table I	120
Increased prevalence	11
Alleys, deaths in	101-105
Alleys and streets, permits to rope off	19
Anacostia flats:	
Bill to provide for the dikeage and drainage of, above Pennsylvania Avenue	
Bridge, status of	58
Mosquitoes, a product of	27
Reclamation of, urged	27
Anacostia River, bill to authorize the Commissioners to enter into contracts for	
the dredging and improvement of, status of	58
Analyses, chemical, number of	37
Analysis of articles	37
Butter	37
Cream	37, 39
Drugs	40
Food	39
Milk	37, 38
Medicines	40
Water	39
Anatomical material:	
Distribution of, table showing	14, 15
Law governing, should be amended	14
Manner of distribution	15
Number of cases	15
Number of students supplied	15
Table showing distribution of	14, 15
Angina pectoris:	
Average age of decedents, Table VI	200
Deaths from, Table I	134
Deaths from, for 25 years, Table XXIX	246-249
Anaemia, deaths from, percentages, etc., Table I	120

	Page.
Animal Industry, Bureau of.....	19
Animals:	
Contagious diseases among.....	19
Contagious cerebro-spinal meningitis.....	19
Cruelty to certain, bill to prevent, status of.....	57
Cruelty to, bill for further prevention of, status of.....	57
Hog cholera at stock yards.....	19
Horses, influenza in.....	19
Impounded—	
Table by months.....	26
Table of, during ten years.....	26
Rabies; subdural inoculation.....	19
Tuberculin test.....	19
Tuberculosis always present.....	19
Aneurisms:	
Average age of decedents, Table VI.....	200
Deaths from, for 25 years, Table XXIX.....	246-249
Annual death rate.....	6
Apoplexy:	
Average age of decedents, Table VI.....	200
Deaths from, for 25 years, Table XXIX.....	246-249
Appendices; report of health officer.....	31
Appendix A—Report of medical sanitary inspector.....	31-35
Appendix B—Report of the chemist.....	37-41
Appendix C—Report of the inspector of live stock and dairy farms.....	43-49
Appendix D—Report of the physician in charge of smallpox hospital.....	51-55
Appendix E—Status of legislation relating to public health in the District of Columbia at the close of the Fifty-sixth Congress.....	57, 58
Appendix F—Statement of diseases treated by physicians to the poor.....	59, 60
Appendix G—List of physicians entitled to practice in the District of Columbia, Dec. 1, 1901.....	61-68
Appendix H—Bertillon classification of causes of death.....	69-79
Appendix I—Vital statistics.....	81-105
Appropriations, Congressional, for wards for minor contagious diseases.....	17
Ashes, removal of.....	21
Asthma, deaths from, Table I.....	147
Atelectasis, deaths, percentages, etc., Table I.....	163
Atrophy, muscular, deaths from, Table I.....	121
Average age of decedents.....	8
Bacterial examination of—	
Diphtheria cultures.....	33
Nose, character of organism.....	33
Throat, character of organism.....	33
Baltimore and Ohio Railroad Station, samples of milk collected at.....	20, 37, 38
Baltimore and Potomac Railroad Station, samples of milk collected at.....	20
Bananas, condemnation of.....	22
Barbering, bill to regulate the practice of, in the District of Columbia, status of.....	58
Barber shops:	
Aseptic and antiseptic.....	27
Licensing of.....	27
Limited legislation relative to, desirable.....	27
Bathing pool, bill for transformation of inner basin of Potomac Flats into, status of.....	57
Barns, cow, careless in caring for.....	44
Bath houses, municipal, needed.....	27
Bedding, etc., disinfection of.....	32
Beef, condemned, amount of.....	22
Bertillon classification of causes of death.....	69-79
Beverages, bill for preventing adulteration, etc., status of.....	57
Bichloride of mercury, for disinfection.....	32
Bills (see Appendix E), status of.....	57, 58
Births, marriages, and deaths, comparative statement, Table XLIII.....	260
Births:	
Illegitimate.....	13
In hospitals, Table XVI.....	234
Legitimate.....	13
Legitimate, illegitimate, with percentages.....	300

	Page.
Births—Continued.	
Number of, reported.....	13
Premature, deaths due to.....	12
Returns of.....	13
Still, number and causes of.....	13
Twin and triplet.....	13
Total reported.....	13
Bone or fertilizing factories, bill to prohibit operation of, in the District of Columbia.....	57
Bones, diseases of, deaths from, Table I.....	163
Box privies, inspection of.....	21
Bladder, diseases of, deaths from, Table I.....	149
Brain:	
Average age of decedents, Table VI.....	200
Softening of, deaths from, Table I.....	121
Brain diseases, deaths from:	
Table XXIX, twenty-six years.....	246-249
Table I.....	121
Breast, nonpuerperal diseases of, deaths from, Table I.....	107
Bright's disease:	
Average age of decedents, Table VI.....	200
Deaths from.....	12
For twenty-six years, Table XXIX.....	246-249
Percentage, etc., Table I.....	149
Bronchitis:	
Acute, deaths from.....	255
Deaths from, by months, Table II.....	197
Deaths for twenty-six years, Table XXXVIII.....	255
Deaths, percentages, etc., Table I.....	134
Buildings, Unsanitary, bill creating a commission for the condemnation of, status of.....	57
Buildings for pound:	
Need of new.....	25
Purchase of site recommended.....	25
Bureau of Animal Industry.....	19
Bureau of food, bill relative to the establishment of, status of.....	57
Burns and scalds:	
Deaths, percentages, etc., Table I.....	177
Deaths due to.....	13
Butter, analysis of.....	37
Cadavers:	
Amendment of law governing the supply of, recommended.....	14
Distribution of, Table —.....	15
Number of.....	15
Number of students supplied.....	15
Cancers:	
Average age of decedents, Table VI.....	200
Deaths from, by age, color, sex, with percentages and nativity, for twenty-six years, Table XXX.....	250
Deaths from, by age, color, and sex, with percentages for twenty-six years, Table XXXIII.....	251
Deaths from, by color, sex, and age, total deaths, etc., Table XXXIV.....	252
Deaths from, colored females, for twenty-six years, Table XXXII.....	251
Deaths from, white females, for twenty-six years, Table XXXI.....	250
Deaths, percentages, etc., Table I.....	107
Candies:	
Analysis of.....	37
Bill for preventing adulteration, misbranding, and imitation of, status of.....	57
Cantaloupes, condemnation of.....	37
Carbuncle, deaths from, Table I.....	162
Cars, steam and street, deaths from.....	13
Cattle:	
Condemnation of.....	45
Branding of diseased.....	46
Diseased, branding of.....	46
Inspection of.....	46
Tuberculous, on dairy farms.....	46
Causes of death, Bertillon's classification of.....	69-79

	Page.
Cemeteries:	
Increased by two.....	14
Franciscan Monastery, number of decedents buried in, and number transported outside of District of Columbia, Table IX.....	203
Protestant Episcopal Cathedral Foundation	14
Censuses:	
Analysis by color, sex, and age.....	6
Basis of calculation for vital statistics	6
Federal and police, comparison	5
Police, more nearly accurate	6
Cerebral congestion, deaths, percentages, etc., Table I.....	121
Cerebral hemorrhage:	
Deaths, percentages, etc., Table I	121
Deaths from	11
Cerebro-spinal meningitis, deaths, percentages, etc., Table I.....	121
Chemical laboratory:	
Analyses, number of.....	19, 37
Articles examined.....	20, 37
Chloride of lime and chlorinated lime	20, 40
Results of examinations in.....	20, 39, 40
Chemists, report of.....	37-41
Childbirth, deaths from accidents of, Table I.....	162
Children, deaths from diseases of.....	8
Deaths of—	
Under 1 year for twenty-five years, Table XXII.....	238-240
Under 1 year, by months, Table III	197-199
Under 5 years, Table IV	199
Under 5 years for twenty-one years, Table XXIII	240, 241
Percentages, to total deaths and births, for twenty-five years, Table XXIV	242
Children's Hospital, deaths at, Table VII.....	201
Cholera, hog, among animals	48
Cholera infantum. (See Diarrheal diseases.)	
Cholera nostras, deaths from, Table I.....	106
Chorea, deaths from, Table I.....	121
Cider, analysis of.....	37
Circulatory system:	
Deaths from diseases of the	11
Table I	131
Cirrhosis of liver:	
Average age of decedents, Table VI.....	200
Deaths from, Table I	148
Deaths from, for twenty-six years, Table XXIX.....	246-249
City dairies, inspection of.....	47
Closets, water, inspection of.....	21
Clothing, bill to investigate the condition of the manufacture and sale of, in District of Columbia, status of.....	58
Colitis, deaths from, Table I.....	135
Colleges, distribution of anatomical material	14, 15
Color, deaths classified by	6
Color and sex, deaths classified by (see table)	7
Colored persons, deaths among	6, 7
Colored persons, includes those of African descent only	6
Columbia Hospital:	
Births at, Table XVI.....	234
Deaths at, Table VII	201
Columbia University Hospital, deaths at, Table VII.....	201
Commissioners of the District of Columbia, bill to authorize the, to enter into contracts for the dredging and improvement of Anacostia River, etc.....	58
Condemnation of insanitary buildings, bill creating a commission for the, status of	57
Condemnation of, table:	
Bananas	22, 23
Beef.....	22, 23
Cantaloupes	22, 23
Cattle	46, 47
Fish	23
Food (see table).....	22, 23, 24
Insanitary buildings	21

Condemnation of, table—Continued.	Page.
Marine products.....	23, 24
Mutton.....	22
Pineapples.....	22, 23
Potatoes.....	22, 23
Radishes.....	22, 23
Tuberculous cattle.....	46, 47
Veal.....	22
Wells.....	39
Condiments.....	37, 38
Bill for preventing adulteration, etc., of, status of.....	57
Congenital debility:	
Deaths, percentages, etc., Table I.....	173
Deaths from.....	12
Congestion, cerebral, deaths, percentages, etc., Table I.....	121
Congestion of liver, deaths, percentages, etc., Table I.....	148
Congestion of lungs:	
Deaths, percentages, etc., Table I.....	135
Deaths from, for twenty-six years, Table XXXIX.....	256
Congress, status of legislation in, relating to public health.....	57, 58
Congressional appropriations for wards for minor contagious diseases.....	17
Consumption:	
Average age of decedents, Table VI.....	200
Deaths from—	
By ages, for twenty-two years, Table XXVIII.....	246
By months, Table II.....	197
For twenty-five years and six months, Table XXVII.....	244, 245
Deaths, percentages, etc., Table I.....	106
Contagious diseases (<i>see also</i> , Minor contagious diseases, wards for).....	16, 17
Contagious diseases among animals:	
Cerebro-spinal meningitis (epidemic).....	48
Glanders.....	48
Hog cholera.....	48
Rabies.....	48
Texas fever.....	48
Contents, table of.....	3
Convictions.....	25
Convulsions of infancy, deaths from, Table I.....	121
Coroner, still births reported by.....	13
Corrosive poisons, deaths due to, Table I.....	177
County, deaths in.....	100, 101
Courtesies, acknowledgment of.....	19
Cows. (<i>See</i> Cattle.)	
Cream and milk:	
Analysis of.....	37, 38
Bill to regulate production and sale of, status of.....	58
Croup, deaths, percentages, etc., Table I.....	106
Cruelty to animals, bill for further prevention of, status of.....	57
Cruelty to certain animals, bill to prevent, status of.....	57
Cultures:	
Diphtheria, number of, examined.....	33
Taken in healthy persons.....	33
Cyanosis, death, percentages, etc., Table I.....	173
Cystitis, deaths from, Table I.....	149
Daily average of deaths for each month.....	9
Dairies:	
Application to maintain.....	25
Cancellation of permits.....	25
Infantile mortality in connection with enforcement of regulations.....	25
Law needs amendment.....	25
Mortality, infantile, in connection with enforcement of regulations.....	25
Permits in force, for maintenance.....	25
Dairies, dairy farms, and dairy products, examination of.....	43
Dairy cows:	
Appropriation for compensation for loss through tuberculin tests, recommended.....	47
Branding of diseased, no authority for.....	46
Condemned, disposal of.....	45

Smallpox—Continued.

Cases of—	Page.
Classification of	51
Number of	51
Location of	52
Percentage of, not vaccinated	51
Character of, relative to vaccination	51
Classification of cases admitted to hospital	51
Disposition of cases	51
History of cases	52, 53
History of red-light treatment in	54, 55
Importation of, from other jurisdictions	52-54
Location of cases of	52
Necessity for quarantine station	18
Number discharged during year	18
Number in hospital at beginning of year	18
Origin of cases	18
Quarantine, domiciliary	54
Quarantine in	53, 54
Quarantine, legal period of	54
Red-light treatment of	54
Severe in character, but no deaths	18
Source of	51-53
Temperature taken in	54
Treatment of, among the Chinese	55
Type of	18
Vaccination—	
Number of	51
Effect of	51
Modified by	51
Smallpox hospital:	
Admissions to	51
Employees of—	
Police powers for	54
Police badges for	54
Importation of, from other jurisdictions	52-54
Red-light treatment at, results of	54
Report of physician in charge of	51-55
Smoke:	
Fines for violations of laws	25
Prosecutions for violations of laws	25
Smoke inspection	25
Softening of brain, deaths from, Table I	121
Soldiers' Home Hospital, deaths at, Table VII	201
Southern Railroad station, samples of milk collected at	37, 38
Spitting on sidewalks in tuberculosis	18
Squares, deaths classified by	81-100
Statistics, vital, calculation of	6
Steam railways, deaths caused by, Table I	177
Stillbirths:	
Cause, legitimacy, etc., Table XIV	232
Causes reported as unknown	13
Illegitimate	13
Legitimate	13
For twenty-three years, Table XXXV	252
Reported by coroner	13
Total reported	13
Stock yards:	
Hog cholera at	48
Inspection of	48
Stomach diseases, deaths from, percentages, etc., Table I	135
Street railways, deaths caused by, Table I	177
Street and alley, permits to rope off	19
Street and alley, permits to rope off	13
Suicides, deaths from	200
Average age of decedents, Table VI	
For twenty-six years, Table XXIX	246-249
Table I	176
Sunstroke:	
Deaths from	12
Deaths, percentages, etc., Table I	177

	Page.
Syphilis, deaths, percentages, etc., Table I	107
Table I.—Deaths by diseases, sex, color, social relation, nativity and months	106-196
I.—Recapitulation	190-196
II.—Deaths from 10 prominent diseases for ten years by months	197
III.—Deaths under 1 year, by months for 1901	197-198
III.—Recapitulation	199
IV.—Deaths under 5 years from principal diseases of childhood	199
V.—Deaths, 70 years of age and over, during 1901	200
VI.—Number and average age of decedents from 18 different diseases and suicides during 1901	200
VII.—Deaths in hospitals and public institutions during 1901	201
VIII.—Deaths and average ages for 1901	201-203
VIII.—Recapitulation	203
IX.—Ceteries and persons buried therein, including those transported out of District for burial	203
X.—Deaths, daily, by color, diseases, and ages, and meteorological conditions	204-227
XI.—Deaths by age, sex, and color, with percentages for twenty-five years	228-229
XII.—Deaths and average ages for twenty-one years	230
XIII.—Typhoid fever, deaths from, twenty-two years	231
XIV.—Stillbirths, cause, legitimacy, and period of uterogestation	232
XV.—Births reported by months and quarters	233
XVI.—Births in hospitals	234
XVII.—Marriages reported, number of brides and grooms	235
XVIII.—Marriages reported, nationality of brides and grooms	235
XIX.—Marriages reported, ages of brides and grooms (white)	235
XX.—Marriages reported, ages of brides and grooms (colored)	236
XI.—Deaths and death rates for twenty-five years	236-238
XXII.—Deaths under 1 year, by months, sex, and color, for twenty-five years	238-240
XXIII.—Deaths under 5 years for twenty-one years	240-241
XXIV.—Percentage of deaths under 1 year, etc., for twenty-five years	242
XXV.—Deaths over 60 years	242-243
XXVI.—Deaths from diarrheal diseases for twenty-four years	243-244
XXVII.—Deaths from consumption, by sex, color, and months, for twenty-five years and six months	244-245
XXVIII.—Deaths from consumption, by ages, for twenty-two years	246
XXIX.—Deaths from 18 diseases and suicides for twenty-six years	246-249
XXX.—Deaths from cancers, by color, sex, and nativity, from September, 1874	250
XXXI.—Deaths from cancers, white females, from September 1, 1874	250
XXXII.—Deaths from cancers, colored females, from September 1, 1874	251
XXXIII.—Deaths from cancers, by age, color, and sex, with percentages, ages, from September 1, 1874	251
XXXIV.—Deaths from cancers, by color, sex, and age, total deaths, etc.	252
XXXV.—Stillbirths, legitimate, illegitimate, percentages, etc., for twenty-three years	252
XXXVI.—Births, legitimate, illegitimate, etc., for twenty-three years	253
XXXVII.—Deaths from pneumonia for twenty-six years	254
XXXVIII.—Deaths from bronchitis for twenty-six years	255
XXXIX.—Deaths from congestion of the lungs for twenty-six years	256
XL.—Deaths from acute lung diseases, with daily dew point, humidity, etc., twenty years	257-258
XLI.—Deaths from pneumonia, bronchitis, and congestion of the lungs, percentages, etc., twenty-six years	258-259
XLII.—Deaths, 60 years and over, comparative statement	259
XLIII.—Marriages, births, and deaths, comparative statement, nine years	260
XLIV.—Temperature, mean, in District of Columbia	260
XLV.—Humidity, mean relative, in District of Columbia	261
XLVI.—Rainfall in District of Columbia	261
XLVII.—Diphtheria, cases and deaths, percentages, etc., 1901	262
XLVIII.—Scarlet fever, cases and deaths, percentages, etc.	262

	Page.
TABLE XLIX.—Population of District of Columbia, deaths, and death rates, by color, for twenty-six years	263
Table of contents	3
Table showing—	
Ages of cases and deaths from diphtheria	34
Ages of cases and deaths from scarlet fever	35
Number of cases and deaths from diphtheria	34
Number of cases and deaths from scarlet fever	35
Number of inspections of dairy farms, etc.	42
Population, by color (police census)	5
Population, deaths, and death rates for ten years ended June 30, 1901	7
Deaths, by classes, arranged by sex and color, with percentages and annual death rates for year ended June 30, 1901	10
Distribution of cadavers under anatomical act during year ended June 30, 1901	14, 15
Statement of work done by physicians to the poor for year ended June 30, 1901	16
Reported cases of scarlet fever for eight years ended June 30, 1901	16
Reported cases of diphtheria for eight years ended June 30, 1901	17
Permits issued to rope off streets and alleys, etc.	19
Consolidated report of nuisances for year ended June 30, 1901	21
Unwholesome food, condemned	22, 23
Inspection and condemnation of marine products	23, 24
Operations of pound for the year ended June 30, 1901	26
Animals impounded during ten years ended June 30, 1901	26
Temperature in District of Columbia, mean, Table XLIV	260
Transcripts from records, number of, issued	13
Travel:	
Permits to obstruct	19
Permits to obstruct, discontinued	19
Triplet birth	13
Trismus nascentium, deaths from, Table I	121
Tuberculin test:	
Application of, successful	46
Appropriation for	47
Recommendation of	46
Use of, in various locations	47
Tuberculosis:	
Cattle with, condemnation of	46
Contraction of, from cows	46
Means to restrict	18
Of intestines, deaths from, Table I	106
Of larynx, deaths from, Table I	106
Of lungs, deaths from	106
Ages and color of decedents, Table I	106
Of meninges, deaths from, Table I	106
Of peritoneum, death from, Table I	106
Spitting on sidewalks in	18
Tuberculous cows:	
Experiments on	46
Milk from	44
Number of, condemned	42
Tumors, malignant, deaths from	10
Twin births	13
Typhilitis, deaths from, Table I	148
Typhoid fever:	
Average age of decedents, Table VI	200
Bill to require the reporting of cases of, to the health department, status of	58
Death rate from, per 10,000	231
Deaths from—	
By months	231
For twenty-two years, Table XIII	231
Table I	106
Decreased prevalence of	11
Reporting of cases by physicians	18
Typho-malarial fever, deaths, percentages, etc., Table I	106
Umbilical hemorrhage, deaths, percentages, etc., Table I	173

	Page.
Undertakers, registered, number of	14
Unnatural causes, deaths from	12, 13
Unwholesome food, condemned, table showing	22, 23
Uremia, deaths, percentages, etc., Table I	149
Urethra, deaths from diseases of, Table I	149
Urinary organs, deaths, percentages, etc., Table I	149
Uterine hemorrhage, deaths from, Table I	151
Uterine tumors, deaths from, Table I	151
Uterus, fibroid of, deaths from, Table I	151
Vaccination:	
Effects of, on smallpox	51
Number of, in smallpox	51
Relation of, to character of smallpox	51
Valvular heart disease, deaths from	11
Varicelli	33
Vaults, fireproof, need of, for records	13
Veal, condemnation of	22
Veterinary inspectors needed	44
Veterinary medicine, status of bill to regulate practice of	58
Violence, deaths due to, Table I	176
Virginia:	
Inspection of cattle in	44
Smallpox in	52
Traveling expenses in, for inspectors	45
Vital statistics	5
Calculation of, based on Federal census	6
Washington Asylum Hospital:	
Births at, Table XVI	234
Deaths in, Table VII	201
Washington barracks, deaths at, Table VII	201
Washington Humane Society, bill to invest control of pound in, status of	58
Washington jail, deaths at, Table VII	201
Water:	
Analysis of	20, 39
Analysis of, from private wells	20, 39
Analysis of, from public wells	20, 39
Potomac, filtration of	26
Results of analysis of	39
Water and sewer connection	21
Water-closets	204-227
Weather conditions, daily, Table X	
Weeds:	
Difficulty in enforcing act for removal of	25
Modification of provisions of act urged	25
Wells	20, 39
Wesbrook, types of diphtheria germs	33
Wharf, fish, need of better	24
Whites:	
Death rate	6
Deaths, total number of	6
Whooping cough:	
Deaths from, by months, Table II	197
Deaths from, percentages, etc., Table I	106
Deaths from, percentages, etc., Table I	176
Wounds, deaths, percentages, etc., Table I	21
Yards, inspection of	27
Yellow fever
